EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment in Louisiana during September stood at 1,613,300, an increase of 6,600 workers over August, but 34,600 below the comparable figure a year ago. The increase was centered in the services and government segments of nonmanufacturing due mostly to seasonal hiring for the new school term. The durable goods sector of the state's manufacturing industries continued to experience the effects of a poor economy. A seasonal increase in food and kindred products was instrumental in the higher employment level for nondurable goods.

1/ Included Avoyelles, Grant, & Rapides parishes. 2/ Includes Ascension, East Baton Rouge, Livingston, and West Baton Rouge parishes. 3/ Lafayette Parish only. 4/ Calcasieu Parish only. 5/ Ouachita Parish only. 6/Includes Jefferson, Orleans, St. Bernard, and St. Tammany parishes. 7/ Includes Bossier, Caddo, and Webster parishes.

This public document was published at a cost of 67 cents per copy by the Louisiana Department of Labor, Office of Employment Security, Research and Statistics Unit, P.O. Box 44094, Baton Rouge, Louisiana 70804. Its purpose is to disseminate information pertaining to the labor market developments and employment trends under the authority of Part 602.6, Title 20, Chap. V. of the Code of Federal Regulations. It was printed in accordance with the standards for printing by state agencies established pursuant to R.S. 43:31.

Monthly employment in the durable goods segment of manufacturing, at 92,500 for September, was 900 lower than the August level and 17,700 below the same month a year earlier. Increased production in the millwork, veneer and plywood industry accounted for the upturn in lumber and wood products employment. Declining activity at iron and steel foundries due to low demand for their products resulted in decreased payrolls for the primary metal industries. Fabricated metal products employment was down as slowdowns occurred in the production of metal cans and shipping containers, fabricated structural metal products and certain miscellaneous fabricated metal products. Less business for firms that manufacture construction, mining and materials handling equipment was instrumental in the lower employment level for the machinery, except electrical, industry. Less employment in the manufacture of communication equipment was primary in the lower electric and electronic equipment payrolls for September. The number of employees in other durable goods also was down this month.

Estimated employment in the nondurable goods segment of manufacturing for September amounted to 104,800, an increase of 600 above last month's level, but a drop of 8,500 from September of last year. The primary force in this month's increase of nondurable goods employment was a seasonal advance in food and kindred products due to increased activity in vegetable canning. Paperboard mills were among the many segments of the paper and allied products industry showing some increase in employees for September. As has been evident throughout the year, several firms in the chemicals and products industry continued to suffer from low demand for their products due to a poor economy. A slowdown in petroleum refining activity in Louisiana was a prime factor in the downturn of petroleum and coal products employment for this month.

Nonmanufacturing employment for September, at 1,416,000, was 6,900 more than last month's figure, but 8,400 lower than the same month a year ago. Mining employment dropped below the previous month's level as a result of curtailment in production of crude petroleum and natural gas. Less business throughout most of the construction industry, with general building construction, especially, experiencing the effects of a depressed market, resulted in a sizeable drop in employment. Transportation and public utilities employment moved to a lower level mostly due to a labor dispute in transportation services and a decrease in communications and public utilities employees. Cutbacks in wholesale trade payrolls were responsible for the downturn in trade employment for September. Several segments of the finance, insurance and real estate industry showed employment declines. The banking segment experienced a large part of the decline. Gains in services for September were due largely to seasonal employment increases in educational services. The largest increase in nonmanufacturing employment for the current month appeared in government as a result of the opening of state and local school systems.

Average weekly earnings of Louisiana's 143,000 production workers in manufacturing increased from $375.65 in August to $383.33 in September, an increase of $7.68 and an increase of $12.33 above the comparable period a year ago. Average hourly earnings were 17 cents higher in September than last month and 93 cents more than September of last year. Weekly hours averaged 39.6 for the curent month, up by 0.1 hours from August's figure. Average weekly earnings in communications and public utilities were up by $10.25 from the August level of $441.14.

Estimated total unemployment in the state for September amounted to 202,200, a decrease of 11,700 below the August level of 213,900. The unemployment rate for September was 10.6 percent compared to 11.2 percent last month and 7.9 percent in September of last year. The comparable national unemployment rate for September was 9.7 percent compared to 9.6 percent in August and 7.3 percent in September of last year. Louisiana's civilian labor force moved from 1,912,500 in August to 1,915,300 in September, an increase of 2,800. Total employment increased from 1,698,600 last month to 1,713,100 in September, an increase of 14,500.

Louisiana's unemployment rate is expected to edge downward during the next two to three months, as the usual fall seasonal upturn begins. An increase in retail trade employment is anticipated over the next few months due to the holiday season and the service industries are also expected to increase. Manufacturing employment is expected to fall slightly.

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment in the Alexandria area was estimated at 54,500 during the month of September. This is an increase of 400 over the previous month. The increase is noted in nonmanufacturing with a slight decrease in manufacturing.

Manufacturng employment decreased to 5,600 which is 100 less than August. The decrease was in other durable goods.

The September estimate of employment in nonmanufacturing was 48,900, an increase of 500 over the previous month. The major increases were in other services and mining, and local government which were brought about by the opening of schools in this area.

Total employment is expected to remain about the same during the next thirty days, with a slight drop in the number of unemployed.

Data in the average earnings table are for approximately 16,100 production workers and are computed on a "gross" basis and reflect overtime, late shift work and incentive rates.

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural employment in the Baton Rouge SMSA was estimated to be 204,600 in September, an increase of 3,600 from the August revised estimate and down 3,400 from last September Total manufacturing had a moderate decrease while nonmanufacturing had a good increase.

Employment in manufacturing industries totaled 24,800 in September, down 200 from the August estimate and down 2,100 from September of last year. The durable goods segment remained stable during September and the nondurable goods segment lost a total of 200 jobs. The loss was due to less business in plastic materials and synthetic resins, synthetic rubber, synthetic and other man-made fibers, except glass, in industrial organic chemicals, and in agricultural chemicals.

Estimated employment in nonmanufacturing industries totaled 179,800 in September, up 3,800 over August's revised estimate of 176,000 and 1,300 lower than September a year ago. Mining employment was down due to less demand for its products. Construction was down as a result of less business in general building contractors-nonresidential buildings, and special trade contractors. Transportation and public utilities were down due to less demand for trucking, local and long distance and in radio and television broadcasting. Wholesase trade was down slightly while retail trade increased due to increased activity. Finance, insurance, real estate, and services were down slightly while government had a large increase due to the reopening of public educational institutions.

Average weekly earnings of Baton Rouge SMSA's 16,100 production workers in all manufacturing was $458.20 in September, down $7.82 from the revised August average. Average weekly hours are down 1.8 hours and average hourly earnings are up $0.15. Less overtime worked contributed to these changes.

Total employment in the Baton Rouge SMSA was estimated at 207,600 during September, an increase of 3,400 over the revised estimate of 204,200 for August. Unemployment totaled 22,100 during the current period with a 9.6 percent rate compared with 23,400 and 10.3 percent for last month. The local area's civilian labor force at 229,800 was up 2,200 over last month's total. Increased activity in agriculture and in education contributed to these improvements.

Seasonal employment increases due to the holiday season are expected to be small but enough to off-set other declines resulting from the national economic conditions.

The Baton Rouge Job Service Office served 2,292 individuals with new or renewal applications, and placed 397 applicants in jobs during September.

The consumer price index for August, 1982 for all urban consumers was 292.8 and for all urban wage and clerical workers 292.4 using base period 1967=100.

EMPLOYMENT AND PAYROLL TRENDS

The increase in non-agricultural employment is due to the increase of government with the reopening of schools and services.

Unemployment will continue at it's present level due to the slow down in drilling activities.

EMPLOYMENT AND PAYROLL TRENDS
LAKE CHARLES SMSA

The Lake Charles Area labor force declined by 1,100 from the mid-August level and all of the decline occured in unemployment. Total employment rose 100 to the current estimate of 66,600. During the twelve month period from September 1981 through August 1982, total employment fell 8,100 while unemployment increased by 4,100.

Employment on area nonagricultural payroll remained unchanged from August, but nonmanufacturing dipped 200 below the month ago level while manufacturing edged upward 200.

Losses in nonfactory employment totaled 500, but this loss was moderated by gains totaling 300. The 200 increase in factory establishments appeared in the nondurable goods sector, specifically in Chemical and Petroleum Products.

Unemployment fell by 1,200 from the August level of 12,500. This decline resulted from the seasonal decrease in new and re-entrants into the labor force and a reduction in unemployment claims due possibly to some workers returning to work.

The outlook is for a slight decline in unemployment during the next thirty days.

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment rose to an estimated 49,600 during mid-September. This was an increase of 1,300 since last month.

Estimated employment in Manufacturing was unchanged from the August estimate.

Gains in nonmanufacturing were estimated at 1,300. Government led the gainers, reflecting the beginning of the fall semester at local educational facilities. Wholesale and Retail Trade gained 200 as wholesalers prepared for the upcoming holiday season. Services and Construction rose by 100 each. All other segments were unchanged from the August estimates.

Employment should remain relatively stable over the next 60 days, while unemployment will remain high.

New Orleans SMSA
EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment in the New Orleans SMSA in September moved down to 508,200, a level 700 below August. In nonmanufacturing, a much larger overall decrease was prevented by a sizeable increase in services that was mostly seasonal in nature. Manufacturing was reduced by cutbacks by shipbuilding and other durable goods.

Manufacturing employment totaled 47,200 for September, 400 less than last month and 6,200 below one year ago. Area shipyards suffered further cutbacks and a decline in the other durable goods segment was due to the diminished demand for those products. Some increase was noted in food and kindred products as seafood processors prepare for seasonal upturns.

Nonmanufacturing showed an overall decrease of 400 despite seasonal trends that normally bring an increase in September. Government was lowered by layoffs of summer workers. In the local sector, the number was large enough to offset callbacks at the beginning of the autumn school term. Construction moved down reflecting problems nationwide in scope. Water transportation fluctuated downward. Public utilities tapered off seasonally. Finance and insurance effected layoffs of summer workers. Trade showed no total change as an increase in retail trade was balanced by a decrease in wholesale trade, mostly in durable goods. Mining held steady as the petroleum industry took advantage of the remaining good weather in the year. More favorably, services showed a large gain, mostly seasonal in nature. Private educational services pulled back up from the summer low. Miscellaneous services added workers. Personal services and business services pushed up. Private health services registered a small gain.

Average weekly earnings for area production workers totaled $349.87 in September, $5.05 below last month's average. Average hourly earnings increased four cents, but this could not offset the drop in average weekly hours of 42 minutes. Compared to one year ago, factory workers are earning an average of $2.08 a week more.

Estimated unemployment in September decreased to 48,900, down 2,800 from August. A seasonal reduction in the number of persons in the labor force was mostly responsible. Joblessness currently accounts for 9.6 percent (not seasonally adjusted) of the labor force compared to 10.1 percent (revised) in August and 7.7 percent in September of last year. Beneficiaries of regular unemployment insurance totaled 14,420. About 44 percent of the claimants were nonwhite; approximately 29 percent were female.

Nonagricultural wage and salary employment in the coming months will be favored by seasonal upturns. Trade will probably begin to add workers to handle shopping for the holiday season. Both public and private educational services are expected to increase employment as the autumn school term moves further along. Less favorably, mining and construction will likely adjust downward as winter weather approaches. Unemployment will hopefully show some seasonal decrease. All changes in the local economy will be strongly affected by developments in the national economy.

Data in the average earnings table are for approximetely 18,800 production workers and are computed on a "gross" basis and reflect overtime, late shift work, and incentive rates.

Shreveport SMSA

EMPLOYMENT AND PAYROLL TRENDS

Total non-agricultural wage and salaried employment in the Shreveport SMSA is estimated at 148,400, up from 147,800 in August and a substantial 6,900 decrease from September 1981. During the past month manufacturing employment shows a decline of 400, while nonmanufacturing increased 1,000.

The decline in total manufacturing employment continues. The durable goods total fell from 19,600 last month to 19,300 in September, and 153,600 less than September 1981. Total non-durable goods employment at 6,000 is 100 below the revised August figure and remains unchanged from the September 1981 estimate.

The nonmanufacturing total of 123,100 is up 1,000 from last month but is 3,300 less than one year ago. Over the past month mining, construction, transportation, public utilities, and services, had a reduction of 1,000 in total employment, this loss was offset with a 2,000 gain in local government when the new school year began.

The average weekly earnings of 18,800 production workers in this area increased from $341.42 last month to $346.33 for September. Average weekly hours rose slightly from 39.7 last month to 39.9, but is below the year ago average of 42.0. Average hourly earnings of $8.68 are nearly unchanged from August and up from $8.02 one year ago.

The current civilian labor force for the Shreveport SMSA is 163,200 with 147,000 employed and 16,200 unemployed. The rate of unemployment is 9.9 percent. The state rate is 10.6 percent and the national rate is 10.1 percent.

Changes in total employment will likely follow the present trend for the next two months. Slight gains expected in trade and government could be reduced by declines in services and manufacturing. The rate of unemployment should remain near ten percent.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment in Louisiana during October amounted to 1,614,400, an increase of 3,200 above the previous month, but down by 35,000 from the comparable period a year ago. Nonmanufacturing employment was estimated at 3,000 above last month's level due largely to seasonal upturns in state and local schools. Manufacturing employment for October was up as a result of a seasonal increase in the food industry.

1/ Included Avoyelles, Grant, & Rapides parishes. 2/ Includes Ascension, East Baton Rouge, Livingston, and West Baton Rouge parishes. 3/ Lafayette Parish only. 4/ Calcasieu Parish only. 5/ Ouachita Parish only. 6/Includes Jefferson, Orleans, St. Bernard, and St. Tammany parishes. 7/ Includes Bossier, Caddo, and Webster parishes.

This public document was published at a cost of 67 cents per copy by the Louisiana Department of Labor, Office of Employment Security, Research and Statistics Unit, P.O. Box 44094, Baton Rouge, Louisiana 70804. Its purpose is to disseminate information pertaining to the labor market developments and employment trends under the authority of Part 602.6, Title 20, Chap. V. of the Code of Federal Regulations. It was printed in accordance with the standards for printing by state agencies established pursuant to R.S. 43:31.

Estimated employment in the durable goods sector of manufacturing stood at 92,400, no change from last month's level, but 15,900 below the comparable period a year earlier. Increased activity at logging camps, sawmills and planing mills, along with an increased demand for millwork, veneer and plywood, moved employment in lumber and wood products upward. Glass and glassware, structural clay products, and concrete, gypsum and plaster products were among the industries contributing to the upturn in stone, clay and glass products. Primary metal industries showed a decline in employees as the primary smelting and refining of nonferrous metals was down for the current month. Less demand for fabricated structural metal products forced employment downward in this segment. Business was down in several firms throughout the machinery, except electrical segment of durable goods. Cutbacks in the production of electric transmission and distribution equipment, electric lighting and wiring equipment, communication equipment, and certain miscellaneous electrical machinery all contributed to the lower employment level in electric and electronic equipment. Transportation equipment payrolls increased due to additional activity in ship and boat building and repairing.

Nondurable goods employment at 104,900 was 200 more than last month, but it was 9,600 below the October a year ago figure. A seasonal increase in food and kindred products payrolls due to increased sugar cane processing accounted for the upward turn in nondurable goods employment. A sizeable drop in paper and allied products employment, due to a labor dispute, was instrumental in holding down the increase of nondurable goods employment for the current month. In October demand for several chemicals and allied products was down resulting in employee cutbacks for this segment. Apparel and other textile products employment was also down from last month.

Louisiana's employment in nonmanufacturing industries during October was 1,417,100, up by 3,000 from September but 9,500 lower than October a year ago. Mining employment fell largely as a result of a decrease in the production of crude petroleum and natural gas. Construction employment was up for the current month as a result of increased activity in general building construction and in certain special trades. Fewer employees in the telephone communication segment of communications was responsible for the slight drop in transportation and public utilities employment. Less business for food stores, auto dealers and service stations, and eating and drinking places accounted for the decline in trade employment. An increase in real estate payrolls was especially instrumental in the higher level of employment exhibited by the finance, insurance and real estate segment of nonmanufacturing. Seasonal drops at two of the state's racetracks, a labor dispute, and seasonal downturns in certain miscellaneous amusement and recreation services all contributed to the decrease in services employment for October. Government employment increased primarily as the result of public educational institutions continuing their seasonal increase.

Average weekly earnings of Louisiana's 143,000 production workers in manufacturing decreased from $379.06 in September to $377.20 in October, a loss of $1.86 but $6.12 above the comparable period a year earlier. Average hourly earnings were down from $9.67 in September to $9.43 in October, a decrease of $0.24 from last month but $0.76 higher than the same time last year. Average weekly hours rose from 39.2 last month to 40.0 for the current month. Average weekly earnings in mining, at $452.15 for October, was down $20.68 from last month's figure of $472.83.

Estimated total unemployment in Louisiana during October amounted to 208,400, a decrease of 5,900 from the September level of 214,300. The unemployment rate for the current month was 10.9 percent, a decrease of 0.2 percent below last month's rate of 11.1 percent and 2.9 percent higher than October of last year. The comparable national unemployment rate for October was 9.9 percent compared to 9.7 percent in September and 7.5 percent in October of last year. Louisiana's civilian labor force moved down from 1,925,600 in September to 1,913,700 in October, a decrease of 11,900. Total employment decreased from 1,711,300 last month to 1,705,300 in October.

The unemployment rate for Louisiana is expected to undergo a decline in the upcoming months due to hiring for the holiday season. Seasonal improvements are expected in services and retail trade employment. Construction employment may show signs of decline.

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment in the Alexandria area was estimated at 54,800 during October. This is an increase of 200 over the previous month and the increase was in nonmanufacturing employment.

Manufacturing employment remained unchanged since last month.

The October estimate of employment in nonmanufacturing was 49,200, an increase of 200 over the previous month. The major increase was in general merchandise under retail trade and there was a slight increase in local government. The only loss noted was in the construction industry.

Total employment is expected to decline during the next thirty days, with the number of unemployed remaining about the same.

Baton Rouge SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural employment in the Baton Rouge SMSA was estimated at 206,900 in October, an increase of 1,800 over the September revised estimate and down 2,300 from the total for last October. Total manufacturing had a slight drop while the nonmanufacturing change was positive during the current period.

Employment in manufacturing industries at 24,700 during October was down 100 from the revised September estimate of 24,800 and down 2,000 from October of last year. The durable goods segment was down 200 due to less business in blast furnaces, steel works, and rolling and finishing mills and in rolling, drawing, and extruding of nonferrous metals. The nondurable goods segment was up 100 due to the seasonal increase in sugar and confectionery products.

Estimated employment in nonmanufacturing industries totaled 182,200 in October, an increase of 1,900 over the September revised estimate of 180,300. Mining employment remained stable while construction employment increased 400 due to more business in general building contractors - nonresidential buildings. Transportation was up 100 due to more activity in services incidental to water transportation and in radio and television broadcasting. Retail trade was up 600 due to seasonal increases in department stores, shoe stores and eating and drinking places. Services were up 200 due to more business in photographic studios - portrait, in miscellaneous business services and in miscellaneous repair shops and related services. Government was up 600 due to a continued seasonal increase in colleges, universities, professional schools, and junior colleges and expanded employment in public order and safety departments.

Average weekly earnings of Baton Rouge SMSA's 15,900 production workers in all manufacturing was $462.92 in October, up $5.90 from September's revised average. Average weekly hours are up 1.0 hour and average hourly earnings are down $0.14. Petro-Chemicals average weekly earnings were down $18.63, average weekly hours down 1.5 hours and average hourly earnings were up four cents. Less overtime worked in industrial inorganic chemicals, industrial organic chemicals, and in agricultural chemicals contributed to these changes.

Total employment in the Baton Rouge SMSA was estimated at 209,000 during October, an increase of 1,200 over the revised estimate of 207,800 in September. Unemployment was estimated at 22,700 for a 9.8 percent rate compared to the 10.2 percent revised rate for September. The civilian labor force totaled 231,700, up 1,200 over last month's total.

Seasonal gains in nonmanufacturing employment should continue the slight downward movement of the unemployment rate.

The Baton Rouge Job Service Office served 2,287 individuals with new or renewal applications, and placed 249 applicants in jobs during October.

The consumer price index for September, 1982 for all urban consumers was 293.3 and for all urban wage and clerical workers 292.8 using base period 1967=100.

Government	11.5	10.8	11.0	+ 0.7	+ 0.5

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural employment increased to 98,300 in October from 98,100 in September. This was an increase of 200. The increase came in nonmanufacturing.

Manufacturing remained stable in October with no significant increases or decreases in that area.

There was a decrease of 600 in mining from 19,400 in October to 20,000 in September. This decrease is due to slack in the drilling aspect of mining. The number of rigs stacked in the oil industry has increased since the beginning of the year. At the present time there is no indication when drilling should increase.

There was an increase in government from 10,800 in September to 11,500 in October.

The outlook for the coming months should be a stablizing of the unemployment rate. Seasonal jobs in retail should increase as the holiday season grows nearer.

EMPLOYMENT AND PAYROLL TRENDS
LAKE CHARLES SMSA

Nonagricultural wage and salary employment remained unchanged from September but changes did ocurr in the two major sub-groups. Nonmanufacturing increased by 100 while manufacturing decreased by 100. The current nonagriculture employment total falls, unhappily, 8,000 below the October 1981 level. During that twelve month period nonfactory employment fell 5,400 while factory employment fell by 2,600.

Nonfactory employment, currently estimated at 53,000 fell 100 below the mid-September level. Losses in Mining, Construction and Government totaling 300 were overcome by gains in Transportation, & Public Utilities, Fianance, Insurance, & Real Estate, and Services totaling 400. During the twelve month period from October 1981 losses occurred in all nonfactory industry segments except Transportation & Public Utilities and Trade.

Factory employment fell by 100 in October to the current estimate of 10,700. This loss occurred in Chemical & Petroleum Products. Over the year losses totaling 2,600 occurred chiefly in Chemical & Petroleum Products.

Little change is expected in employment during the next 30 days and unemployment may continue to edge upward due to seasonal influences.

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment declined to an estimated 49,000 during mid-October. This was a loss of 600 from last month.

Manufacturing was down by 200. All loss was in non-durable goods.

Nonmanufacturing experienced a loss of 400. The only gain was an estimated 100 in construction. Wholesale and retail trade was down by 100. Services and government each had estimated losses of 200. All other segments were unchanged.

The upcoming holiday season should keep employment near the present level. Unemployment is expected to remain high.

New Orleans SMSA
EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment in the New Orleans SMSA in October tapered off to 508,100, showing a slight overall reduction of 100 since September. In manufacturing, a gain in ship and boatbuilding and repairing was offset by a decrease in other durable goods. In nonmanufacturing, seasonal upturns in educational services barely offset decreases in many other industries.

In October, manufacturing employment totaled 47,000, 200 less than last month. The other durable goods segment suffered the layoff of 600 workers as economic conditions and decreased demand for the products continue to plaque it. An increase of 400 in ship and boatbuilding and repairing helped to offset the loss in the other durable goods segment. Other manufacturing industries held steady during the month. Manufacturing employment has decreased by 6,000 compared to one year ago.

Nonmanufacturing eked out only a small total gain of 100 despite seasonal upturns in schools. Both public and private educational services added workers as the autumn semester moved along, bringing overall gains to services and government. Less favorable were the decreases in other industry divisions. Water transportation moved down to the lowest level in two years. Construction reduced employment by special trade contractors and heavy construction. Trade effected layoffs in both the wholesale and retail sectors. In wholesale trade, a sizeable decrease in durable goods was partly offset by a small increase in nondurable goods. Retail trade was lowered by employment retrenchments by food stores and automotive dealers and service stations. Finance and insurance displayed cutbacks in each major segment. Mining held steady as the petroleum industry took advantage of the remaining good weather before winter.

Average weekly earnings totaled $361.92 for area factory workers, $12.98 above the September average. Although average hourly earnings dropped ten cents, average weekly hours increased one hour and 48 minutes. Compared to one year ago, average weekly earnings are up $3.99.

Estimated unemployment in October moved down to 50,100, a level of 2,600 below September. A decrease in the number of entrants and reentrants into the labor force accounted for much of the change. Joblessness presently represents 9.8 percent (not seasonally adjusted) of the labor force compared to 10.3 percent (revised) in September and 7.7 percent in October of last year. Recipients of regular unemployment insurance numbered 15,265. Approximately 44 percent of the claimants were nonwhite; about 27 percent were female.

Nonagricultural wage and salary employment in the coming months will benefit from normal seasonal changes. Retail trade will be favored by shopping for the holiday season although gains may be braked by the effects of the area's economic problems. Services will be boosted by the opening of the Fair Grounds racing season. Less favorably, construction and mining will make downward adjustments necessitated by less favorable weather conditions. Unemployment will hopefully show some seasonal decrease.

Data in the average earnings table are for approximetely 18,800 production workers and are computed on a "gross" basis and reflect overtime, late shift work, and incentive rates.

Shreveport SMSA

EMPLOYMENT AND PAYROLL TRENDS

The Shreveport SMSA has a total of 146,900 in nonagricultural employment, down 900 from last month and 5,800 below the October 1981 estimate. Total manufacturing, at 25,200, is 100 less than was estimated in September, while the non-manufacturing employment total declined to 121,700, down from a revised September estimate of 122,500.

Total manufacturing employment continues the downward trend from 25,300 last month to 25,200 for October, down 3,800 from October 1981. This loss has occurred in manufacturing of durable goods. The nondurable goods employment total remains unchanged from last month and the year ago estimate.

Nonmanufacturing employment, at 121,700, is 800 less than last month and 2,000 lower than the October 1981 figure. Most of the decline in nonmanufacturing employment occurred in mining and trade. The reduced production of crude petroleum and natural gas caused a decline in mining from 8,500 one year ago to 6,200 this month. Over the past year total trade employment dropped from 35,400 to 33,500. Employment gains during the past twelve months occurred in the services segment of nonmanufacturing, and government shows a slight gain. Most of the increase in the services segment resulted from a growth in business services establishments and in health services, with the growth of new and expanding medical facilities.

The average weekly earnings of 18,800 production workers in manufacturing decreased from $353.51 in September to $328.94 in October and down from $336.88 one year ago. Average weekly hours, at 39.3, are 0.6 hours less than the previous month and 2.6 hours less than October 1981. The average hourly earnings dropped $0.49 below the September average and $0.33 more than one year ago.

The Shreveport SMSA has an employment estimate of 145,100 for October, down from the revised September estimate of 145,800 and 6,700 less than the same month last year. The unemployment total of 17,000 is 10.5 percent of the total labor force. This compares with a 10.4 percent unemployment rate for the nation and a 10.9 percent for the state.

Unemployment in this area is expected to increase through December. In addition to the scheduled layoff in manufacturing, adverse weather conditions will reduce construction, logging and other outdoor activities. This expected employment reduction will likely exceed the gain anticipated in retail trade during the holiday season.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment in Louisiana during November stood at 1,613,600, a drop of 100 workers from last month and 36,900 below the comparable figure a year ago. A downturn in several nonmanufacturing segments, including mining, construction, transportation and public utilities, finance, insurance and real estate, and services, accounted for the lower November total for nonagricultural employment. An increase in nondurable goods payrolls was responsible for the higher employment level in manufacturing.

1/ Included Avoyelles, Grant, & Rapides parishes. 2/ Includes Ascension, East Baton Rouge, Livingston, and West Baton Rouge parishes. 3/ Lafayette Parish only. 4/ Calcasieu Parish only. 5/ Ouachita Parish only. 6/Includes Jefferson, Orleans, St. Bernard, and St. Tammany parishes. 7/ Includes Bossier, Caddo, and Webster parishes.

This public document was published at a cost of 67 cents per copy by the Louisiana Department of Labor, Office of Employment Security, Research and Statistics Unit, P.O. Box 44094, Baton Rouge, Louisiana 70804. Its purpose is to disseminate information pertaining to the labor market developments and employment trends under the authority of Part 602.6, Title 20, Chap. V. of the Code of Federal Regulations. It was printed in accordance with the standards for printing by state agencies established pursuant to R.S. 43:31.

Estimated employment in the durable goods segment of manufacturing fell by 200 workers in the October to November reporting period. A decrease in lumber and wood products employment resulted from cutbacks in the production of millwork, veneer, plywood, wood buildings and mobile homes, and certain miscellaneous wood products. An upturn in demand for structural clay products, concrete, gypsum, plaster products, abrasive and asbestos products, and certain miscellaneous nonmetallic mineral products accounted for the increase in stone, clay and glass products employment. Declining activity at blast furnaces, steel works, rolling and finishing mills, iron and steel foundries, and establishments that smelt and refine nonferrous metals was responsible for the lower employment level in primary metal industries. Fabricated metal products employment was down as a slowdown occurred in the production of fabricated structural metal products. Less business for firms that manufacture engines and turbines and construction, mining and materials handling equipment was responsible for payroll cutbacks in the machinery, except electrical, industry. Transportation equipment employment was up this month due to payroll additions in the ship and boat building and repairing segment.

The estimated level of nondurable goods employment for November was 106,200, up by 1,300 from October. Much of the increase occurred in food and kindred products due to a seasonal increase in sugar cane processing. The settlement of a labor dispute in the paper and allied products industry was also largely responsible for this month's upturn. Employment in the apparel and other textile products industry and in printing and publishing was also higher for the current month. Payrolls in the chemicals and allied products industry were lower for November.

Louisiana's employment in nonmanufacturing industries during November was 1,415,600, down by 1,200 from October and 14,700 lower than November a year ago. Mining employment fell largely as a result of a decrease in the production of crude petroleum and natural gas. Construction employment was down for the current month as a result of decreased activity in general building construction. Port activity decreased during November, which was largely responsible for the decline in transportatin and public utilities employment. Trade employment moved up due mostly to increased hiring in general merchandise, apparel and accessories establishments for the holiday season. Seasonal cutbacks at one of Louisiana's racetracks contributed significantly to the decline in services employment. Payroll additions in local government were most instrumental in the upturn of government employment for November.

Average weekly earnings of Louisiana's 143,600 production workers in manufacturing increased from $380.69 in October to $386.10 in November, an increase of $5.41 and an increase of $6.34 above the comparable period a year ago. Average hourly earnings were three cents lower in November than last month and $0.71 more than November of last year. Weekly hours averaged 40.9 for the current month, up by 0.7 from 40.2 in October. Average weekly earnings in mining were up by $36.87 from the October level of $461.47.

Estimated total unemployment during November amounted to 201,000, a decrease of 15,100 from the October level of 216,100. The unemployment rate for November was 10.7 percent, a decrease of 0.5 percent from last month's rate of 11.2 percent and 2.4 percent higher than November of last year. The comparable national unemployment rate for November was 10.4 percent compared to 9.9 percent in October and 7.9 percent in November of last year. Louisiana's civilian labor force fell from 1,920,800 in October to 1,877,200 in November, a decrease of 43,600. Total employment decreased from 1,704,700 last month to 1,676,200 in November.

Louisiana's unemployment rate should decline slightly next month. Retail trade employment is expected to continue its upturn next month due to the holiday season and the service industries are expected to increase. Manufacturing employment is expected to decrease.

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment for the Alexandria Area was estimated at 54,900 in November. This was an increase of 100 over the previous month. The increase was noted in nonmanufacturing, while manufacturing remained unchanged.

Nonmanufacturing employment estimate for November was 100 over the previous month. The major gain was in general merchandise under retail trade. All other segments remained unchanged since last month.

The unemployment rate should rise during the next thirty days as the adverse weather conditions will hamper construction and other outdoor related employment.

Baton Rouge SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural employment in the Baton Rouge SMSA was estimated at 208,300 in November, an increase of 1,700 over the October revised estimate of 206,600 and down 1,400 from last November's total. Total manufacturing and total nonmanufacturing employment increased during the current period.

Employment in manufacturing industries at 24,900 during November was up 200 from the revised October estimate and down 1,700 from last November. The durable goods segment was up 100 due to more business in Miscellaneous Machinery, except elecrical. The nondurable goods segment was up 100 due to the continued seasonal increase in sugar and confectionery products.

Estimated employment in nonmanufacturing industries totaled 183,400 in November, an increase of 1,500 over the revised estimate of 181,900 for October. Mining employment had no change. Construction was up 400 due to more business in construction other than building construction - general contractors, and construction - special trade contractors. Transportation, and public utilities, up 200 due to increased activity in trucking, local and long distance and radio and television broadcasting. Wholesale trade had no change while retail trade continued its seasonal increase of 700. Finance, insurance and real estate was down 300 due to employment drops in commercial and stock savings banks, savings and loan associations, life insurance, and insurance agents, brokers, and service. Services increased 400 due to more business in photographic studios-portrait, miscellaneous amusement and recreation services, hospitals, and in engineering, architectural, and surveying services. The government employment increase was 100.

Average weekly earnings of Baton Rouge SMSA's 16,100 production workers in all manufacturing was $481.66 in November, up $18.74 from October's revised average. Average weekly hours are up 1.9 hours and average hourly earnings are down seven cents. Petro-chemicals average weekly earnings are down $20.93, average weekly hours down 0.7 hours, and average hourly earnings are down $0.26. Less overtime worked at premium pay contributed to these changes.

Total employment in the Baton Rouge SMSA was estimated at 208,300 during November, a decrease of 300 from the revised estimate of 208,600 in October. Unemployment totaled 21,500 during November, a drop of 2,000 from the revised October estimate. The current unemployment rate of 9.4 percent is down 0.7 percent from last month's 10.1 percent revised rate and compares favorably with the current 11.2 percent state rate. The civilian labor force totaled 229,800, a drop of 2,300 from October's revised total but increased 100 over last year's total.

Employment expected to continue near its current level during the coming months with unemployment dropping some and the unemployment rate down also.

The Baton Rouge Job Service Office served 1,700 individuals with new or renewal application, and placed 400 applicants in jobs during November.

The consumer price index for October, 1982 for all urban consumers was 294.1 and for all urban wage and clerical workers 293.6 using base period 1967=100.

EMPLOYMENT AND PAYROLL TRENDS

Lafayette's total nonagricultural employment for November stood at 98,600, a gain of 300 over the previous month and a gain of 4,900 over the same month last year. Additional hiring in mining and wholesale and retail trade was responsible for part of this gain. Construction has remained steady because of the commercial construction that has increased in the area. Housing starts are still very slow with a possible increase due to the interest rates for home mortgages on the decline.

Manufacturing, Transportation and Public Utilities, Finance, Insurance, and Real Estate and Services have remained stable as compared to the previous month. They have all increased when compared to the same period of time in 1981 with the exception of Finance, Insurance, and Real Estate which declined. This is understandable due to the slowdown in Real Estate.

One can be much more optimistic about the future if interest rates continue to decline.

EMPLOYMENT AND PAYROLL TRENDS
LAKE CHARLES SMSA

Employment on nonagricultural payrolls fell 700 below the mid-October level. All of this decline occurred in the nonmanufacturing sector. Manufacturing remained unchanged. During the twelve month period beginning November 1981 through October, 1982 there was a loss of 8,700 jobs in nonagricultural establishments. Of this total 2,400 were from factory establishments.

Nonmanufacturing employment, currently estimated at 52,400, decreased by 700 from last month due chiefly to substantial declines in Construction and Transportation & Utilities. The 200 loss in Transportation is temporary and a rebound is expected. The 100 gain in Trade resulted from seasonal influences. Mining and Services suffered small losses.

Trade employeemnt is expected to increase slightly for the Christmas Season but this may be offset by the slowly diminishing area employment total.

Unemployment dropped 900 below the October revised estimate and the rate is currently 14.2 percent.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural wage and salary employment declined by an estimated 100 to 49,000 at mid-November.

Manufacturing was unchanged over the month but is an estimated 1,200 below the November 1981 estimate.

Nonmanufacturing, down by an estimated 100, was estimated at 42,600. Wholesale and Retail Trade experienced an expected gain of 300 as the holiday season approaches and additional workers are needed to meet the increased business. These gains were offset by the losses of their segment. Mining was down 100. Construction was down by 200 as adverse weather conditions began earlier than usual this year. Services employment was down by 100. All other segments were unchanged.

Employment is expected to decline slightly over the next 60 days while unemployment rises. Weather conditions will be a factor.

Data in the average earnings table are for approximately 31,900 production workers and are computed on a "gross" basis and reflect overtime, late shift work, and incentive rates.

New Orleans SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment in the New Orleans SMSA in November tapered off to 508,100, down 400 from October. Nonmanufacturing was hurt by decreases or the lack of substantial gain in all industry groups. An upturn in manufacturing helped prevent a larger overall employment downturn.

Manufacturing employment totaled 47,300 for November, 200 more than last month. The increase was in the durable goods segment, while the nondurable goods segment held steady over the month. The additional hiring at area shipyards and the increase in stone, clay and glass products more than offset the downturns in fabricated metal products and machinery. Compared to one year ago, manufacturing employment is down 4,600.

Nonmanufacturing showed a loss of 600 despite seasonal trends that in past years have usually brought an overall gain. Wholesale trade effected layoffs in the durable goods sector. In retail trade, general merchandise stores, apparel stores, and miscellaneous stores benefited from the beginning of shopping for the holiday season. Less favorable were the decreases in employment exhibited by eating and drinking places and automotive dealers and gasoline service stations. Services were lowered by reductions in employment by amusement services, miscellaneous repair services, personal services, and the hotel-motel industry. Insurance carriers and real estate made downward adjustments. More favorably, construction added a small number of workers. Transportation registered a small gain spread through most industries. Federal government edged up slightly. Mining held steady.

Factory workers in the New Orleans area earned an average $372.30 a week in November, $12.88 above last month's average. Longer work schedules of an average two hours and twelve minutes more than offset the drop of $0.19 an hour in pay. Compared to one year ago, average weekly earnings are up $1.33.

Estimated unemployment in November decreased to 48,900, down 3,900 from October. A reduction in the number of entrants and reentrants into the labor force was responsible for much of the change. Joblessness currently comprises 9.7 percent (not seasonally adjusted) of the labor force compared to 10.3 percent (revised) in October and 8.2 percent in November of last year. Beneficiaries of regular unemployment insurance totaled 15,539. About 44.0 percent of the claimants were nonwhite; approximately 27.0 percent were female.

Nonagricultural wage and salary employment in the coming months is anticipated to show changes typically seasonal in nature. Retail trade will move up in December as shopping for the holiday season nears its peak and then will adjust downward in January. Services will benefit from the opening of the Fair Grounds racing season. Construction and mining are expected to make cutbacks necessitated by winter weather conditions. Unemployment is predicted to show some increase. Changes in the local economy will depend to a great extent on changes in the national economy.

Shreveport SMSA

EMPLOYMENT AND PAYROLL TRENDS

The current nonagricultural wage and salaried employment in the Shreveport SMSA is 145,600, down from the revised October estimate of 146,700, and a significant drop from 152,800 one year ago. Total manufacturing shows a decline from 25,200 last month to 25,100. This loss occurred in the Durable Goods sector with less activity in Lumber and Wood Products. In the services sector of nonmanufacturing, employment fell 1,000 below the previous month.

Nonmanufacturing employment, estimated at 120,500 is down from 121,500 last month and from 123,800 in November 1981. During the past month Construction Employment fell from 7,900 to 7,600, while the services segment of nonmanufacturing shows a big loss of 1,000. This decrease in services resulted primarily from the closing of the race track season and from a general empoyment reduction in business services. Gains in retail trade helped to offset some of the loss that occurred in the services segment.

The Shreveport SMSA has 18,900 production workers with average weekly earnings of $324.48. These earnings are down from $326.04 last month and from $335.71 one year ago. Average weekly hours fell from 39.0 in October to 38.4 and down from 41.6 in November 1981. Average hourly earnings at $8.45, are up from $8.36 last month and $8.07 one year ago.

The total Civilian Labor Force in this area is 159,800, comprised of 142,200 employed and 17,600 unemployed. The unemployment rate is 11.0 percent.

The outlook is for the present trend to continue for the next two months. Unemployment will rise above the present level, while employment is expected to show additional reductions in manufacturing, construction, mining and agriculture.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment in Louisiana during December stood at 1,611,600, a drop of 2,600 workers from last month and 39,800 below the comparable figure a year ago. A downturn in Louisiana's manufacturing industries accounted for the state's lower employment level in December. In durable goods decreases in electric and electronic equipment employment and in nondurable goods seasonal declines in food and kindred products were significant in the drop of Louisiana's manufacturing payrolls. Employment gains in trade and services were largely responsible for the higher level of nonmanufacturing employment.

1/ Includes Avoyelles, Grant, & Rapides parishes. 2/ Includes Ascension, East Baton Rouge, Livingston, and West Baton Rouge parishes. 3/ Lafayette Parish only. 4/ Calcasieu Parish only. 5/ Ouachita Parish only. 6/ Includes Jefferson, Orleans, St. Bernard, and St. Tammany parishes. 7/ Includes Bossier, Caddo, and Webster parishes.

This public document was published at a cost of 67 cents per copy by the Louisiana Department of Labor, Office of Employment Security, Research and Statistics Unit, P.O. Box 44094, Baton Rouge, Louisiana 70804. Its purpose is to disseminate information pertaining to the labor market developments and employment trends under the authority of Part 602.6, Title 20, Chap. V. of the Code of Federal Regulations. It was printed in accordance with the standards for printing by state agencies established pursuant to R.S. 43:31.

Estimated employment in the durable goods segment of manufacturing fell by 2,000 workers from November's level. Lumber and wood products employment was down for the current month as activity at sawmills and planing mills slowed in December. Cutbacks in the production of fabricated structural metal products accounted for the decline in fabricated metal products employment. Contributing to the downturn in machinery, except electrical, payrolls was lower product demand for farm and garden machinery and special industry machinery. A slowdown in the manufacture of communication equipment was largely responsible for the decrease in electric and electronic equipment payrolls. Transportation equipment employment fell as a result of a decline in ship and boat building and repairing activity.

Estimated employment in the nondurable goods segment of manufacturing for December was 104,600, down by 1,600 from November. Most of the decrease was due to a seasonal decline in the vegetable canning industry. Decreased production of certain miscellaneous fabricated textile products was instrumental in the lower employment level for the apparel and other textile products industry. The employment level in the chemicals and allied products industry dropped as low demand resulted in decreased production of plastics materials and synthetic resins, synthetic rubber, synthetic and other man made fibers, and industrial chemicals. Petroleum and coal products payrolls were cut due to a decline in petroleum refining activity in December.

Nonmanufacturing employment in Louisiana for December, at 1,417,400, was 1,000 more than last month's figure, but 16,400 lower than the same month a year ago. Mining employment fell below last month's level as a result of curtailment in the production of crude petroleum and natural gas. Less business for most of the construction industry, with heavy construction, especially, experiencing the effects of a poor economy, resulted in a sizeable employment drop for this segment of Louisiana's nonmanufacturing industry. Contributing to the downturn in transportation and public utilities employment was an employee cutback in the communications and public utilities segment. As anticipated, trade employment moved up as a result of increased hiring in general merchandise, apparel and accessories establishment for the holiday season. Credit agencies other than banks and holding and other investment offices were instrumental in the slight upturn of finance, insurance and real estate payrolls. A prime force in the upward fluctuation of services employment was a seasonal upturn at one of the state's racetracks. Payroll reductions in state and local education were a central factor in the drop of government employment for December.

Average weekly earnings of Louisiana's 140,200 production workers in manufacturing decreased from $393.34 in November to $390.99 in December, a loss of $2.35. Average hourly earnings, at $9.49, was eight cents above last month's level and $0.69 cents over the same time last year. Weekly hours average 41.2 during December, a decrease of 0.6 hours from the November figure. Average weekly earnings in communications and public utilities were up by $14.98 from the November level of $455.36

Estimated total unemployment during December amounted to 196,700, a decrease of 13,300 from the November level of 210,000. The unemployment rate for December was 10.7 percent, a decrease 0.3 percent below last month's rate of 11.0 percent but 2.1 percent higher than December of last year. The comparable national unemployment rate for December was 10.5 percent, compared to 10.4 percent in November and 8.3 percent in December of last year. Louisiana's civilian labor force moved from 1,913,400 in November to 1,846,600 in December, a decrease of 66,800. Total employment decreased from 1,703,400 in November to 1,649,900 for the current month, a decrease of 53,500.

The level of nonagricultural workers in Louisiana is expected to decline in the upcoming month. Unfavorable weather conditions will have an adverse effect on construction, transportation and some manufacturing industries. Employment in both manufacturing and nonmanufacturing is anticipated to fall in the next month or two.

(1) Geographic coverage of data now published for this area differs from the standard definition. Data also includes Avoyelles Parish.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural wage and salary employment for the Alexandria area was estimated at 54,600 in December. This was a decrease of 300 since the previous month. The major decrease was in manufacturing with nonmanufacturing showing an overall gain.

Manufacturing employment declined by 500 in December. The main loss of 400 was in food and kindred products with a slight reduction in other durable goods. The loss in food and kindred products was seasonal reductions at local food processing plants.

Nonmanufacturing shows an overall increase of 200 since last month. The major gain was in retail trade which was prompted by the holiday season. Slight losses were noted in the construction and other services and mining segments.
Total nonagricultural wage and salary employment will decrease over the next thirty days as the holiday season ends. The unemployment rate and number of unemployed should increase during the next thirty days.

BATON ROUGE SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural employment in the Baton Rouge SMSA was estimated at 208,800 during December, an increase of 600 over the November revised estimate of 208,200 and down 800 from last December's total. A small decline in total manufacturing was offset by a seasonal increase in total nonmanufacturing employment.

Employment in manufacturing industries at 24,800 in December was down 100 from the November revised estimate and down 1,700 from last December. Durable goods had no change as an increase of 100 in concrete, gypsum and plaster products was offset by a loss of 100 in miscellaneous machinery, except electrical, due to less business. The nondurable segment was down 100 due to less demand for industrial organic chemicals.

Estimated employment in nonmanufacturing industries at 184,000 during December was up 700 over the revised November estimate of 183,300. Mining was up 100 due to increased activity while construction increased 100 due to more business in the special trade contractors group. Transportation and public utilities dropped 100 due to less demand for services incidental to water transportation and electrical services. Wholesale trade was up 100 and retail trade was up 800 due to seasonal increases. Finance, Insurance and Real Estate were up 100 due to increased activity in commercial and stock savings banks and fire, marine, and casualty insurance. Services increased 100 due primarily to more business in miscellaneous business services. Government employment was down 500 due to budget restraints in state government.

Total employment of Baton Rouge SMSA's residents was estimated at 206,000 in December, a decrease of 5,500 from November's revised estimate of 211,500 and down 4,700 from last December. Unemployment totaled 20,400 during December, down 2,000 from the revised November estimate. December's 9.0 percent unemployment rate is down from November's 9.6 percent rate and compares favorably with the 11.0 percent state rate. The civilian labor force, totaling 226,400 during December, dropped 7,500 from November's revised total and dropped 2,800 from last December.

Average weekly earnings of Baton Rouge SMSA's 16,000 production workers in all manufacturing was $476.10 in December, down $4.53 from November's revised average. Average weekly hours are down 1.5 hours and average hourly earnings are up $0.29. Less overtime worked at premium pay contributed to these changes.

A seasonal drop is expected in employment in the coming month resulting with increases in unemployment and the unemployment rate.

The Baton Rouge Job Service Office served 2,617 individuals with new or renewal application, and placed 392 applicants in jobs during December.

The consumer price index for November, 1982 for all urban consumers was 293.6 and for all urban wage and clerical workers 293.2 using base period 1967=100.

EMPLOYMENT AND PAYROLL TRENDS

Lafayette's non-agricultural employment for December stood at 99,600, a gain of 1,000 over the previous month and a gain of 5,400 over the same month last year. Additional hiring for the holiday season was responsible for part of this increase. Increases in services were also part of this increase.

There was no increase in manufacturing over the previous month but there was a 400 increase over the same period last year.

Non-manufacturing increased 1,000 over the previous month and 5,000 in comparison to the same period of time last year. The major factor which contributed to this increase was the increase in wholesale and retail trade. This was due to the increase in hiring for the Christmas season.

Services increased by 200 over the previous month. Government remained stable with 11,400.

The unemployment rate should rise over the next thirty days as a result of weather conditions which restrict construction and other employment which is conducted outdoors. Another factor contributing to the rise is the lack of drilling activities in the oil industry and its related services.

EMPLOYMENT AND PAYROLL TRENDS

Small losses in manufacturing and nonmanufacturing resulted in a 200 drop in nonfarm payroll employment from mid November. Declines over the year totaled 8,000. Nonmanufacturing fell by 6,000 while manufacturing showed a 2,000 job loss.

The loss of 100 in manufacturing from mid November occurred in Chemical and Petroleum Products as product demand continued to ebb. The loss during the twelve months from December 1981 also occurred chiefly in the Petro-Chemical industry for the same reason.

The seasonal increase in retail trade employment, though not as great as December 1981, was offset by a loss of 400 in Construction. This resulted in a 100 job loss in nonfactory establishments. The twelve-month loss in nonfactory jobs was also centered in construction which experienced a decline of 5,100 to the current estimate of 4,700.
The outlook calls for further job losses in Trade as extra "Christmas" helpers are released from employment. Inclement weather may cause construction employment to continue downward through January 1983.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment rose to an estimate 49,400 during mid December. This was 400 above the November estimate, but 1,200 below the December 1981 estimate.

Manufacturing was up 100 from the November estimate, the gain was in other durable goods. Over the year, manufacturing declined by 1,100.

Nonmanufacturing was up 300 to an estimated 42,900. Wholesale and Retail trade was up 400, reflecting the increase in Trade as the holiday season reached its peak. Government gained 100 workers. Construction was down by 100 as was Transportation, Communication and Public Utilities. All other segments were unchanged.

Usual trends would indicate that employment will drop and unemployment will rise over the next 30 to 60 day period. The ending of the holiday season and adverse weather conditions will be factors.

NEW ORLEANS SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment in the New Orleans SMSA in December pushed up to 509,700, a level 800 above November. Seasonal upturns in retail trade and services offset decreases in manufacturing and the other sectors of nonmanufacturing.

Manufacturing employment dropped to 47,000 in December, 200 less than last month. The downturn was due to layoffs at area shipyards and seasonal decreases in food and kindred products. Compared to one year ago, employment in manufacturing has diminished by 4,800 workers.

Nonmanufacturing showed an increase of 1,000, mainly reflecting seasonal factors. Retail trade added workers as shopping for the holiday season neared its peak, largely in general merchandise stores, apparel stores, and miscellaneous stores. Services were boosted by the opening of the Fair Grounds racing season and a seasonal increase in business services. Less favorably, wholesale trade reduced employment in the durable goods sector. Government exhibited minor cutbacks in local and state government. Banking and real estate effected small number of layoffs. Transportation and communication were lowered by scattered small decreases. Construction made downward adjustments necessary for the winter season. Mining held steady.

Area production workers earned an average $382.18 a week in December, $14.06 above last month's average. Average hourly earnings rose $0.28 and average weekly hours increased 18 minutes. Compared to December 1981, average weekly earnings are up $19.01.

Estimated unemployment in December decreased to 46,300, a level 5,500 below November. Seasonal factors were mostly responsible. Joblessness presently accounts for 9.3 percent (not seasonally adjusted) of the labor force compared to 10.0 percent (revised) in November and 7.9 percent in December of last year. Recipients of regular unemployment insurance benefits numbered 15,483. Approximately 43.0 percent of the claimants were nonwhite; about 25.0 percent were female.

Nonagricultural wage and salary employment in the coming months is expected to show changes usually exhibited in the beginning of the year. Retail trade will adjust downward following the close of the holiday season. Construction and mining will be hampered by winter weather conditions. Unemployment will likely increase as employment decreases.

SHREVEPORT SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salaried employment in the Shreveport SMSA is 143,600, dropping below the revised November estimate of 145,000, and 9,700 less than December 1981. Manufacturing employment at 23,700, is down 1,300 from the revised November total of 25,000. Total nonmanufacturing employment remained nearly unchanged from the previous month.

The durable goods segment of manufacturing continues to show employment reductions. The declining market for metals and machinery products has resulted in the loss of 1,400 jobs during the past month, with more than 900 from one firm.

Employment in nonmanufacturing shows only a slight change from last month. The December estimate of 119,900 is 100 less than the total for last month, but shows a moderate decline from the 124,600 total for December 1981. During the past month an employment gain of 100 from increased construction activity was offset by a loss of the same number in mining operations. A 200 gain in retail trade was offset by a reduction of the same amount in transportation and public utilities. A general employment decline in services establishments amounted to a 300 drop from November and this cancelled a gain of 200 in government employment.

Average weekly earnings of 17,500 production workers in the Shreveport SMSA rose from $331.18 in November to $334.62 in December, but remains below the $334.37 average for December, 1981. Average hourly earnings fell from $8.47 in November to $8.45 and is $0.46 more than December of last year. Average weekly hours rose slightly from 39.1 last month to 39.6 hours and is down from 43.1 in December 1981.

The civilian labor force for the Shreveport SMSA is 156,600, with 138,300 employed and 18,300 unemployed. The unemployment total remains unchanged from last month and 5,400 more than one year ago. The current unemployment rate is 11.7 percent, up from the revised November unemployment rate of 11.3 percent. The unemployment rate of the state is 10.7 percent and the national rate is 10.8 percent.

The employment outlook for this area is for little change during the next few months. One manufacturing firm is expected to stop production in February and this will affect approximately 300 workers. Unemployment will remain high and possibly exceed the present rate before the trend reverses.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment in Louisiana during January stood at 1,587,600, a decrease of 19,500 employees from last month and 26,000 fewer than January last year. Most of the decrease was centered in the state's nonmanufacturing industries with all segments declining from last month's employment levels. A seasonal decrease in the food and kindred products segment of nondurable goods was significant in the decline of the state's manufacturing employment.

1/ Includes Avoyelles, Grant, & Rapides parishes. 2/ Includes Ascension, East Baton Rouge, Livingston, and West Baton Rouge parishes. 3/ Lafayette Parish only. 4/ Calcasieu Parish only. 5/ Ouachita Parish only. 6/ Includes Jefferson, Orleans, St. Bernard, and St. Tammany parishes. 7/ Includes Bossier, Caddo, and Webster parishes.

This public document was published at a cost of 67 cents per copy by the Louisiana Department of Labor, Office of Employment Security, Research and Statistics Unit, P.O. Box 44094, Baton Rouge, Louisiana 70804. Its purpose is to disseminate information pertaining to the labor market developments and employment trends under the authority of Part 602.6, Title 20, Chap. V. of the Code of Federal Regulations. It was printed in accordance with the standards for printing by state agencies established pursuant to R.S. 43:31.

Estimated employment in the durable goods segment of manufacturing, at 92,100 for January, was 400 lower than the December level and 13,100 below the same month a year earlier. An increase in activity at sawmills and planing mills was responsible for the slight upturn in the lumber and wood products industry. Furniture and fixtures employment was higher for the current month resulting in large part from a slight increase in the manufacture of household furniture. Stone, clay and glass products employment moved down in January as a result of declining need for concrete, gypsum and plaster products. Primary metal industries employment fell due to less activity at iron and steel foundries and decreased production of primary nonferrous metals. Employee cutbacks in industries manufacturing fabricated structural metal products and miscellaneous fabricated metal products accounted for the lower employment level in fabricated metal products. Less business for several segments of the machinery, except electrical, industry was responsible for the downturn in employment for this industry. Payrolls in Louisiana's electric and electronic equipment firms were higher for January due mostly to increased production of miscellaneous electrical equipment and supplies. A decline in activity at the state's shipyards forced employment in the transportation equipment industry below last month's level.

Nondurable goods employment, at 102,900, was 3,600 fewer than last month and 5,300 below the January a year ago figure. A downturn in food and kindred products employment was a prime factor in the downward fluctuation of nondurable goods employment for the current month. A seasonal decrease in sugar cane processing contributed most to the downturn in food and kindred products employment. Declines in the manufacture of men's and boy's furnishings and miscellaneous fabricated textile products primarily accounted for the lower employment level in apparel and other textile products. Chemicals and allied products employment was down as less business foced cutbacks in the production of industrial organic chemicals, plastics materials and synthetics, industrial organic chemicals and agricultural chemicals. A slowdown in petroleum refining was largely responsible for the decrease in petroleum and coal products employment. Employment was down also for paper and allied products and other nondurable goods.

Nonmanufacturing employment for January, estimated at 1,392,600, was 15,500 fewer than last month and 7,600 lower than the same month a year ago. Mining employment dropped below the previous month's level as a result of curtailment in production of crude petroleum and natural gas. Construction employment was down for the current month as a result of decreased activity in general building construction and heavy construction. Transportation and public utilities payrolls were lower than last month due to less business in trucking and warehousing, marine cargo handling and telephone communication. As expected, cutbacks in retail trade payroll levels due to the ending of the holiday season were most significant in the downward turn of trade employment. Less activity in banking, insurance, and holding and other investment offices contributed to the employment decline in finance, insurance and real estate. Services employment in January dropped from the December level largely as a result of a decline in educational services employees. Cutbacks in state education employees accounted for the decrease in government employment.

Average weekly earnings of Louisiana's 138,100 production workers in manufacturing decreased from $401.38 in December to $383.53 in January, a decrease of $17.85 but an increase of $48.18 above the comparable period a year ago. Average hourly earnings were $0.29 lower in January than last month and $0.31 lower than January of last year. Weekly hours averaged 42.1 for the current month, down by 0.6 hours from December's figure. Average weekly earnings in mining were up by $25.85 from the December level of $446.18.

Estimated total unemployment in the state for January amounted to 203,900, a decrease of 11,500 from the December level of 215,400. The unemployment rate for January was 11.3 percent compared to 11.6 percent last month and 9.4 percent in January of last year. The comparable national unemployment rate for January was 11.4 percent compared to 10.5 percent in December and 9.4 percent in January of last year. Louisiana's civilian labor force moved from 1,855,000 in December to 1,811,800 in January, a decrease of 43,200. Total employment decreased from 1,639,600 last month to 1,607,900 in January, a decrease of 31,700.

The state's unemployment rate should decline slightly in the next few months. Construction, mining and certain segments of government should exhibit a moderate upward trend in the upcoming month. Manufacturing employment may edge up slightly.

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural employment in the Alexandria area was estimated at 53,600 during January. This is 900 below the previous months estimate. The major decline was in the nonmanufacturing industries with manufacturing showing only a slight loss.

Manufacturing employment dropped 100 below the December estimate. The loss was in lumber and wood products under durable goods.

Nonmanufacturing employment for January declined by 800 since last month. The losses were in the construction, and wholesale and retail industries. These losses were seasonal, due to the weather, and the ending of the holiday season.

Total employment should be fairly constant over the next 30 days. Unemployment may increase slightly due to the inclement weather.

BATON ROUGE SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural employment in the Baton Rouge SMSA was estimated at 206,100 during January, a decrease of 3,700 from December's revised estimate and an increase from last January's total. Manufacturing was down 300 and nonmanufacturing dropped 3,400 during January.

Employment in manufacturing industries at 24,900 in January was down 300 from the December revised estimate and down 1,900 from last January. Durable goods had no change while the nondurable goods segment was down 300 due to a seasonal drop of 200 in sugar and confectionery products and a loss of 100 due to less demand for industrial organic chemicals.

Estimated employment in nonmanufacturing industries at 181,200 for January was down 3,400 from the revised December estimate of 184,600. Mining had no change while construction increased 100 due to more activity in heavy construction, except highway and street construction. Wholesale trade and services were also up 100 each. Transportation and public utilities were down 100 and retail trade was down 1,500 due to seasonal decline. Government was down 2,100 due to semester breaks in colleges, universities, professional schools, and junior colleges. Finance, insurance and real estate remained stable during the current month.

Total employment of Baton Rouge SMSA's residents was estimated at 205,800, a seasonal drop of 4,300 from December's revised estimate of 210,100 and an increase of 2,000 over last January's estimate. The unemployed count was 21,200 during January, up 1,200 from December's estimate. January's 9.4 percent unemployment rate is down from December's revised 9.6 percent rate. The state rate for January is 11.3 percent. The civilian labor force for January at 227,000 is down 5,500 from December's total and down 4,700 from last January.

Average weekly earnings of Baton Rouge SMSA's 16,100 production workers in all manufacturing was $474.33 in January, down $7.70 from December's average. Average weekly hours were down 2.7 hours while average hourly earnings increased by $0.56. Less overtime worked at premium pay contributed to these changes.

The increasing unemployment and unemployment rate is expected to continue their seasonal increase during the coming month.

The Baton Rouge Job Service Office served 2,569 individuals with new or renewal application, and placed 383 applicants in jobs during January.

The consumer price index for December, 1982 for all urban consumers was 292.4 and for all urban wage and clerical workers 292.0 using base period 1967=100.

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural employment in the Lafayette SMSA for January was estimated at 98,500, a drop of 2,200 from December's revised total of 100,700.

Total manufacturing stood at 5,500 for January, a gain of 300 over the previous month of December. The gains were in durable and non-durable goods.

Nonmanufacturing employment at 93,000 for January was down 2,500 from the previous month of December with 95,500. Less business and unfavorable weather conditions were responsible for some of the decrease. Semester breaks in college and seasonal reductions due to the holiday season accounted for much of the other.

The booming growth in mining over the past few years has hit an all time slump. Drilling activities have slowed down and it has affected all of the companies affiliated with it. Many leaders in the oilfield industry predict the growth will be gradual when it starts.

EMPLOYMENT AND PAYROLL TRENDS

Both manufacturing and nonmanufacturing industry groups combined to experience an area job loss of 1,100 from mid-December, and a 5,900 job loss from January 1982. Seasonal influences and a declining economy are the major factors contributing to these losses.

Manufacturing employment, currently estimated at 10,300, fell 200 below the December level. Durable and nondurable goods suffered equal losses. The current factory job estimate showed a decline of 1,900 over-the-year and nondurable goods garnered most of this.

Nonfactory employment dropped 900 between December and January due chiefly to seasonal influences. Trade employment dipped 700 below December while transportation & public utilities fell by 200, and finance, insurance, & real estate, and government dropped 100 each. The only gainer was services. During the twelve months from January, 1982, construction employment experienced the largest loss with a decline of 2,800.

The outlook anticipates more employment decline and continued rising unemployment during the next 30 days.

EMPLOYMENT AND PAYROLL TRENDS

Total employment in the Monroe SMSA declined by an estimated 1,500 to 50,300 during mid-January. This is an expected decline as trade declines following the holiday season and school facilities take a semester break.

Manufacturing rose by an estimated 100. This gain was in nondurable goods.

Nonmanufacturing was down by an estimated 1,600. The largest loss was in government, 1,300, and reflected primarily the semester break at local educational facilities. Wholesale and retail trade declined by 200 as workers hired for the holiday season were laid off. Services was down by 100. All other segments were unchanged.

Employment is expected to decline while unemployment rises over the next 30-60 day period. Weather conditions should be an important factor.

NEW ORLEANS SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment in the New Orleans SMSA in January decreased to 510,600, down 3,100 from December and down 5,800 from January 1982. Normal seasonal downward adjustments in nonmanufacturing accounted for most of the change. Changes in manufacturing were scattered and small.

Manufacturing employment totaled 46,100 for January, 300 less than last month. Layoffs were reported in ship and boatbuilding and repairing, the other durable goods segment, and apparel and other textile products. The other manufacturing industries held steady over the month. Employment in manufacturing is down 3,300 compared to one year ago.

Nonmanufacturing exhibited a decrease of 2,800, reflecting mostly normal seasonal changes. Retail trade effected layoffs following the close of the holiday season. Wholesale trade decreased in both the durable goods and nondurable goods sectors. Services were lowered mainly by a temporary downturn in private educational services as schools moved from one semester to another. Transportation was hindered by winter weather conditions along with problems of the national economy. Construction registered only a minimal loss. Mining eased down. Finance displayed decreases in employment by banking as well as by other credit agencies. More favorably, state government and local government showed small upturns. Changes in federal government were minor.

Average weekly earnings for area production workers totaled $376.88 in January, $6.92 less than last month. Average weekly hours did not change, the decrease was due to a drop of $0.17 in average hourly earnings. Compared to one year ago, average weekly earnings are up $68.62. A large part of this difference, however, was due to unusual weather conditions in the area last January, which resulted in low average weekly hours.

Estimated unemployment in January moved down to 48,500, a level of 2,900 below December. Partly responsible was a decrease in the number of entrants and reentrants into the labor force with the passing of the holiday season. Unemployment currently represents 9.6 percent (not seasonally adjusted) of the labor force compared to 10.0 percent (revised) in December and 8.2 percent in January of last year. Beneficiaries of regular unemployment insurance totaled 16,720. About 42.0 percent of the claimants were nonwhite; approximately 26.0 percent were female.

Nonagricultural wage and salary employment in the coming months is predicted to show normal seasonal changes. Retail trade will probably make further downward adjustments following the close of the holiday season. Construction and mining will be hindered by winter weather conditions. Unemployment will likely show some increase.

SHREVEPORT SMSA

EMPLOYMENT AND PAYROLL TRENDS

The Shreveport SMSA has an estimated 144,500 employed in nonagricultural wage and salaried employment. This total is down from a revised December estimate of 146,200 and the year ago total of 149,800. Manufacturing employment at 23,300, remains unchanged from last month and has declined from the year ago estimate of 27,500.

Total nonmanufacturing employment dropped to 121,200 in January, down 1,700 from last month and 1,100 less than January, 1982. The most significant loss occurred in trade; down 1,000 from the revised December estimate and fell 1,400 below the January 1982 estimate. Building construction is nearly unchanged with employment estimates showing a slight drop from last month and from one year ago. A reduction in railroad and communications employment contributed most to the decline in the transportation and public utilities segment. In the services segment, increases in business, health, legal and agricultural services were not enough to off-set employment losses in lodging, amusement and recreation, educational and social services.

Total government employment is down from 25,900 last month to 25,600. Payroll reductions in federal, state and local government contributed to this decline.

Average weekly earnings of 17,300 production workers in manufacturing fell from $332.20 in December to $319.02. Average hourly earnings are $8.18, down from $8.41 last month and below the $8.33 average one year ago. Average weekly hours, at 39.0, are nearly unchanged from 39.5 last month.

The total civilian labor force of 158,300 includes 140,600 employed and 17,700 unemployed. The preliminary unemployment rate is 11.2 percent. The revised total unemployment for December rose to 20,300 and the unemployment rate reached 12.5 percent.

The present outlook is more encouraging. Unemployment for this area is not expected to exceed the December total of 20,300, barring an unexpected plant closing or large layoff. The unemployment rate should level off near the 12.0 percent rate before slowly moving downward with the anticipated strengthening of the nation's economy.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment in Louisiana during February stood at 1,588,000, an increase of 2,500 employees from last month, but 34,600 fewer than February a year ago. The state's nonmanufacturing industries, especially services and government, accounted for the higher employment level for the current month. Louisiana's manufacturing payrolls were down as a result of declines in both the durable and nondurable goods segments.

1/ Includes Avoyelles, Grant, & Rapides parishes. 2/ Includes Ascension, East Baton Rouge, Livingston, and West Baton Rouge parishes. 3/ Lafayette Parish only. 4/ Calcasieu Parish only. 5/ Ouachita Parish only. 6/ Includes Jefferson, Orleans, St. Bernard, and St. Tammany parishes. 7/ Includes Bossier, Caddo, and Webster parishes.

This public document was published at a cost of 67 cents per copy by the Louisiana Department of Labor, Office of Employment Security, Research and Statistics Unit, P.O. Box 44094, Baton Rouge, Louisiana 70804. Its purpose is to disseminate information pertaining to the labor market developments and employment trends under the authority of Part 602.6, Title 20, Chap. V. of the Code of Federal Regulations. It was printed in accordance with the standards for printing by state agencies established pursuant to R.S. 43:31.

Employment in the durable goods segment of manufacturing, estimated at 90,900 for February, was 1,200 lower than the January level of 92,100 and 14,500 below the year ago figure. An increase in the production of millwork, plywood and structural members was primarily responsible for the upturn in lumber and wood products employment. Primary metal industries employment fell due to low demand for primary nonferrous metals. Employee cutbacks in establishments engaged in manufacturing construction and related machinery, metalworking machinery, and general industrial machinery contributed to the lower employment level in the machinery, except electrical, industry. Payrolls in the state's electric and electronic equipment firms were lower as a result of decreased production of electric distributing equipment and communication equipment. Employment in Louisiana's transportation equipment industry dropped due to a decline in activity at the state's shipyards. Employee additions in certain miscellaneous manufacturing industries were significant in the upturn of other durable goods employment for February.

Estimated employment in the nondurable goods segment of manufacturing for February was 102,100, down by 900 from last month. Much of the decrease in food and kindred products employment was attributable to a seasonal decline in the vegetable canning industry. Decreased production of certain miscellaneous fabricated textile products was instrumental in the lower employment level for the apparel and other textile products industry. A labor dispute at one of the state's paper mills was largely responsible for the drop in paper and allied products employment. Payrolls at plants producing chemicals and allied products were down for February as a result of low demand for industrial organic and inorganic chemicals.

Nonmanufacturing employment for February, at 1,395,000, was up by 4,600 over January's level, but 14,000 lower than February a year ago. Mining employment was down largely as a result of a slowdown in the exploration for oil and gas. An upturn in general building construction accounted for the increased construction payrolls. Increased activity at the state's ports was largely responsible for the higher employment level in transportation and public utilities. A decrease in trade was centered in the retail segment as department stores, apparel stores, and variety and discount outlets cut their payrolls in February. Finance, insurance and real estate experienced no change in employment level for the January to February reporting period. Increases in educational services were significant in the upward fluctuation of services employment. Estimated government employment in February was up by 4,800 due in large part to an increase in state education payrolls.

Average weekly earnings of Louisiana's 136,600 production workers in manufacturing decreased from $389.64 in January to $376.89 in February, a loss of $12.75. Average hourly earnings, at $9.59, was four cents above last month's level and $0.45 over the same time last year. Weekly hours averaged 39.3 during February, a decrease of 1.5 hours from the January figure. Average weekly earnings in mining were down by $15.72 from the January level of $508.69.

Estimated total unemployment in Louisiana for February amounted to 211,000, a decrease of 3,100 from the January level of 214,100. The unemployment rate for February was 11.6 percent compared to 11.8 percent last month and 8.9 percent in February of last year. The comparable national unemployment rate for February was 11.3 percent compared to 11.4 percent in January and 9.6 percent in February of last year. Louisiana's civilian labor force moved from 1,820,400 in January to 1,820,200 in February, a drop of 200. Total employment increased from 1,606,300 last month to 1,609,200 in February, an increase of 2,900.

The unemployment rate for the state is expected to undergo a slight decline during the upcoming months. Certain segments of nonmanufacturing, in particular construction, trade and services, should edge upward in the next few months. Manufacturing employment may slip somewhat from the present level.

(1) Geographic coverage of data now published for this area differs from the standard definition. Data also includes Avoyelles Parish.

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural employment in the Alexandria area was estimated at 53,500 during February. This is 100 below the previous months estimate. The major decline was in the nonmanufacturing industries with manufacturing remaining unchanged.

Manufacturing employment unchanged since the previous month has declined 300 from this month a year ago.

Nonmanufacturing employment for February was estimated at 48,300, this was a loss of 100 from last month. The loss was in general merchandise under retail trade. All other segments remained unchanged from the previous month.

Total employment should increase and the number of unemployed decrease during the next 30 days, with the primary factor being favorable weather conditions.

BATON ROUGE SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural employment in the Baton Rouge SMSA was estimated at 207,800 during February, an increase of 2,300 from January's revised estimate of 205,500 and up 1,100 over last February's total. Manufacturing was down 100 while nonmanufacturing increased 2,400 during February.

Employment in manufacturing industries at 24,900 in February was down 100 from the revised January estimate and down 1,700 from last February. Other durable goods was down 100 due to employment declines in blast furnaces, steel works, and rolling and finishing mills and in iron and steel foundries. Nondurable goods employment remained stable during the current period.

Estimated employment in nonmanufacturing industries at 182,900 for February was up 2,400 from the revised January estimate of 180,500. Construction, the only nonmanufacturing industry with a decline, was down 100 due to a decline in heavy construction, except highway and street construction. Mining, transportation & public utilities, wholesale trade, and finance, insurance and real estate employment remained stable during the period. Retail trade was up 100 due to more business in lumber and other building materials, early spring weather providing increased activity in retail nurseries, lawn and garden supplies and more business in grocery stores and in eating and drinking places. Service industries were up 500 due to more business in: Miscellaneous business services, miscellaneous repair shops and related services, and in job training and vocational rehabilitation services. Government employment was up 2,000 due to the end of semester breaks and rehiring of student workers in colleges, universities, professional schools, and junior colleges.

Total employment of Baton Rouge SMSA's residents was estimated at 206,600, an increase of 1,500 from January's revised estimate of 205,100 and down 800 from last February's estimate. Unemployment totaled 20,700 during February, down 1,100 from January's estimate. The 9.1 percent unemployment rate is down from January's revised 9.6 percent rate. February's state rate is 11.6 percent. The civilian labor force for February, at 227,300, is up 400 from January's total and up 3,300 over last February.

Average weekly earnings of Baton Rouge SMSA's 15,900 production workers in all manufacturing industries was $452.01 in February, down $26.16 from January's average due to a drop in average weekly hours and less overtime worked at premium pay. Average weekly hours were down 2.4 hours while average hourly earnings were up four cents.

Seasonal gains and increased activity, due to the good weather, is expected to improve employment in the area during the coming months.

The Baton Rouge and Gonzales Job Service Offices served 2,287 individuals with new or renewal application, and placed 269 applicants in jobs during February.

The consumer price index for January, 1983 for all urban consumers was 293.1 and for all urban wage and clerical workers 292.1 using base period 1967=100.

EMPLOYMENT AND PAYROLL TRENDS

Lafayette's nonagricultural employment for February was estimated at 98,300, a decrease of 200 over the previous month of January and 700 above a comparable figure a year ago.

Non-manufacturing remained stable and manufacturing dropped 200 over the previous month.

Mining showed a 100 increase over the previous month. The extreme growth in this area has slowed down as a result of restricted drilling.

Construction showed a slight increase. This is due to a decrease in interest rates and some new residential construction.

Most of the other industries have remained relatively stable and has shown little growth.

The unemployment rate for the Lafayette SMSA is expected to remain about the same for the upcoming months. Most of the industries will remain stable with the exception of construction which may increase as a result of declining interest rates.

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment edged upward 100 over the mid-January level. The gain occurred in the manufacturing sector as nonmanufacturing remained unchanged. The current nonfarm employment total falls 5,500 below the year ago level to the current estimate of 60,900. This loss occurred in all areas of the area industry groups except Finance, Insurance and Government.

Manufacturing employment, in February, totaled 10,300. This was an increase of 100 over the Janaury level and was centered in durable goods. During the twelve month period from February 1982 factory employment fell by 1,800 and the greater loss occurred in nondurable goods. Most of this loss resulted from a greatly reduced product demand.

Employment in nonfactory establishments remained unchanged between January and February but there were changes within this major group. Trade employment dropped by 200 while transportation and public utilities increased by 200. An increase of 100 in services was negated by a loss of 100 in government.

Little change is expected in employment and unemployment may continue to rise slowly.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employmnent in the Monroe SMSA climbed to an estimated 51,700, an increase of 1,400 from the January estimate.

Manufacturing was unchanged.

Nonmanufacturing was up 1,400. The bulk of the increase was in Government and reflected the beginning of the spring semester at local educational facilities. Wholesale and retail trade was up an estimated 100. Services also rose by 100. The only loss was 100 in Construction. All other segments were unchanged.

Employment in the area is expected to remain relatively stable, while unemployment will remain high.

NEW ORLEANS SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment in the New Orleans SMSA in February moved down to 509,000, a level 2,000 below January and 8,500 below February of last year. A further seasonal downturn in retail trade and cutbacks in manufacturing were responsible for most of the over-the-month change.

Manufacturing employment plunged to a new low of 45,000 for February, down 1,200 from last month. The durable goods sector was devasted by large layoffs in ship and boatbuilding and repairing and in the other durable goods segment. Employment in manufacturing in the New Orleans area has dropped 4,100 workers compared to one year ago.

Nonmanufacturing experienced a decrease of 800, mainly reflecting seasonal factors. Retail trade made further downward adjustments following the holiday season, largely in general merchandise stores, apparel stores, and miscellaneous stores. Construction reduced employment, which is normal in this season of the year. Mining tapered off. Transportation was lowered by decreases in water transportation, motor freight transportation, and air transportation. More favorably, services were boosted by a strong upturn in private educational services as the spring semester moved further along. Banking and real estate edged up. Local government added workers in city and parish administrative services. State government exhibited a mild general upturn. Federal government eased down in the "others" segment.

The average weekly earnings for area production workers totaled $332.79 for February, a drop of $35.95 from last month's average. Shorter work schedules, especially in fabricated metal products and ship and boatbuilding and repairing, were largely responsible for the decrease. Factory workers are earning an average $23.27 less a week than this time last year.

The preliminary unemployment estimate for February totaled 50,100, a level 1,100 below the January revised total of 51,200. The unemployment rate for February was 9.9 percent compared to 10.1 percent (revised) last month and 8.1 percent in February of last year. The comparable state unemployment rate for February was 11.6 percent and the national rate was 11.3 percent.

Nonagricultural wage and salary employment in the coming months is expected to show changes typically seasonal in nature. Mining and construction will benefit from better weather conditions. Retail trade will be favored by shopping for the Easter season. Less favorably, services will reflect the closing of the Fair Grounds racing season. Hopefully, unemployment will show some decrease as employment increases.

EMPLOYMENT AND PAYROLL TRENDS

The total nonagricultural wage and salaried employment for the Shreveport SMSA is 144,100, down from the revised January estimate of 144,500 and the year ago figure of 150,200. Manufacturing employment, at 23,200, is unchanged from the previous month and is 4,100 less than February 1982. Durable goods employment for this area is 17,300, which remains the same as the January revised estimate, but is well below the year ago estimate of 21,400. Employment in nondurable goods shows no change from last month or one year ago.

Nonmanufacturing employment is estimated as 120,900, down 400 from the revised Janaury total and 2,000 less than February 1982. The decline in production of crude petroleum and natural gas is reflected in the current estimate of 7,400, down from 7,700 last month. Retail trade continues to show an employment reduction, down 600 from last month and slightly less than February, 1982.

An increase in local government, primarily local education, accounts for most of the gain in total government employment since last month.

Average weekly earnings of 17,800 production workers rose $4.90, up from $365.64 last month to $370.54. Average hourly earnings increased from $9.21 in February to $9.31. The average weekly hours are nearly unchanged, up 0.2 from last month.

The total civilian labor force for this area is 159,500, including 140,000 employed and 19,500 unemployed. The unemployment rate is 12.2 percent, compared with a revised January rate of 11.7 percent and 8.5 percent one year ago.

The outlook is for little change through the first quarter of 1983. Unemployment will remain high and near the present level.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment in Louisiana during March stood at 1,588,600, no change from last month's figure, but 40,200 fewer than March of last year. An increase in the state's nonmanufacturing employment was spearheaded by an upturn in services employees. Wholesale and retail trade, finance, insurance and real estate, and government also showed growth for the current month. March payrolls in manufacturing were lower as both the durable and nondurable goods industries fell from previous employment levels.

1/ Includes Avoyelles, Grant, & Rapides parishes. 2/ Includes Ascension, East Baton Rouge, Livingston, and West Baton Rouge parishes. 3/ Lafayette Parish only. 4/ Calcasieu Parish only. 5/ Ouachita Parish only. 6/ Includes Jefferson, Orleans, St. Bernard, and St. Tammany parishes. 7/ Includes Bossier, Caddo, and Webster parishes.

This public document was published at a cost of 67 cents per copy by the Louisiana Department of Labor, Office of Employment Security, Research and Statistics Unit, P.O. Box 44094, Baton Rouge, Louisiana 70804. Its purpose is to disseminate information pertaining to the labor market developments and employment trends under the authority of Part 602.6, Title 20, Chap. V. of the Code of Federal Regulations. It was printed in accordance with the standards for printing by state agencies established pursuant to R.S. 43:31.

Durable goods employment for March, estimated at 90,700, was 300 below last month and 13,800 lower than the same month a year age. Furniture and fixtures employment was down due to production cuts in public building and related furniture. Less demand for glass, glassware, concrete, gypsum and plaster products accounted for the decrease in stone, clay and glass products payrolls. Slight upturns in the manufacture of metal cans and shipping containers, fabricated structural metal products, and certain ordnance and accessories were responsible for the increase in fabricated metal products employment. Machinery, except electrical, employment fell from February's level due to cutbacks in the manufacture of construction and related machinery. Increased need for electric lighting and wiring equipment and certain miscellaneous electrical equipment and supplies was responsible for the higher employment level in the electric and electronic equipment industry. Transportation equipment experienced an employment drop due to less business for the state's shipyards.

Total nondurable goods employment for March, at 101,800, was down by 400 from the February level and 5,900 lower than March a year ago. A seasonal decrease in seafood canning was a large factor in the drop of employment in the food and kindred products industry. Cutbacks in paper mills payrolls contributed to the slight downturn in paper and allied products employment. Accounting for the drop in chemicals and allied products payrolls for March was a cutback in the production of plastics materials and synthetics. Manufacture of textile mill products, rubber products, and certain miscellaneous products was increased in March resulting in a higher employment for other nondurable goods.

Total nonmanufacturing employment for March was estimated at 1,396,100, an increase of 700 over February's level, but 20,500 lower than March of last year. Decreased production of crude petroleum and natural gas was responsible for the drop in mining employment. Cutbacks by general building contractors in their payrolls accounted for the lower employment level in the construction industry. Less business for the state's ports and decreased telephone communication employment both were largely responsible for the downturn in transportation and public utilities. Payroll additions in building materials and garden supplies stores, at certain miscellaneous retail outlets, and in eating and drinking places all contributed to the increase in trade employment for March. More business for insurance carriers was instrumental in the higher employment level for finance, insurance and real estate. Among the many services showing growth for the current month were mailing, reproduction and stenographic services; dance halls, studios and schools; miscellaneous amusement recreational services and social services. Estimated government employment in March was up by 500, due, in large part, to an increase in local government, except education, payrolls.

Average weekly earnings of Louisiana's 136,100 production workers in manufacturing decreased from $378.63 in February to $377.06 in March, a loss of $1.57. Average hourly earnings, at $9.57, was four cents below last month's level and $0.33 over March of last year. Weekly hours averaged 39.4 during March, no change from last month's figure. Average weekly earnings in mining were up by $25.72 from the February level of $501.06.

Estimated total unemployment during March amounted to 222,900, an increase of 200 above the February level of 222,700 and 57,400 higher than March of last year. The uremployment rate for March was 12.1 percent, a decrease of 0.1 percentage points below last month's rate, but 3.1 percentage points higher than March of last year. The comparable national unemployment rate for March was 10.8 percent compared to 11.3 percent in February and 9.5 percent in March of last year. The state's civilian labor force moved from 1,832,500 in February to 1,838,600 in March, an increase of 6,100. Total employment increased from 1,609,800 last month to 1,615,700 for the current month, an increase of 5,900, but a drop of 56,300 from March a year ago.

Unemployment should decline until schools begin the summer vacation period; then rise, as youths seek employment for the summer. Better weather and a slowly improving economy should result in increased employment for the construction industry during the upcoming months. Services employment is also expected to evidence growth. Manufacturing employment may fall slightly next month.

---

(1) Data in the average earnings table are for approximately 136,100 full and part-time workers in manufacturing and 114,900 nonsupervisory employees in communications, public utilities, mining and banking. The averages are computed on a "Gross" basis and reflect over-time, late shift work and incentive rates.

EMPLOYMENT AND PAYROLL TRENDS

The Alexandria area nonagricultural wage and salary employment increased in March to an estimated 53,900, up 200 from the previous month. The gain was in nonmanufacturing with manufacturing remaining unchanged.

Manufacturing employment, unchanged since the previous month, has declined 300 from this month a year ago. The decline is noted in durable goods.

Nonmanufacturing employment for March was estimated at 48,700, up 200 from last month. The gain was in construction, services and mining with each segment increasing approximately 100. The other segments remained unchanged since February. Compared to this month a year ago nonmanufacturing employment is up 1,300 with the major increase in retail trade and smaller increases in services and mining and government.

The unemployment rate should decline during the next sixty days as weather conditions improve. Corresponding with this decrease should be an increase in total employment.

Data in the average earnings table are for approximately 15,800 production workers and are computed on a "gross" basis and reflect overtime, late shift work and incentive rates.

BATON ROUGE SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural employment in the Baton Rouge SMSA was estimated at 207,900 during March and remained essentially unchanged from February's revised estimate. March employment was 400 above the same month a year ago. A loss of 300 jobs in manufacturing industries was offset by a similar gain in nonmanufacturing.

Employment in manufacturing industries at 24,600 in March was down 300 from the revised February estimate and down 1,500 from last March. Employment in the durable goods segment of manufacturing was up 100 due primarily to more business in iron and steel foundries and in miscellaneous machinery, except electrical. Nondurable goods employment was down 400. Food and kindred products were down 100. Chemicals and petroleum products were down 200 due to less business in industrial organic chemicals and in industrial inorganic chemicals. Other nondurable goods were down 100 due to less activity in paper mills, except building paper mills.

Estimated employment in nonmanufacturing industries at 183,300 for March was up 300 from the revised February estimate of 183,000. Mining and transportation and public utilities had no change while wholesale trade and retail trade had a seasonal drop of 100 each. Construction was up 100 due to more activity in heavy construction, except highway and street construction. Finance, insurance and real estate was up 100 due primarily to more activity in real estate operators (except developers) and lessors. Services were up 100 due to increased activity in hotels, motels and tourist courts and in job training and vocational rehabilitation services. Government employment moved up by 200 during the period.

Average weekly earnings of Baton Rouge SMSA's 15,800 production workers in all manufacturing industries was $483.84 in March, up $10.85 over February's revised average. Average weekly hours at 42.0 were up 1.4 hours and average hourly earnings at $11.52 were down $0.13 due to more overtime by lower paid employees.

Total employment of Baton Rouge SMSA's residents was estimated at 207,100, an increase of 200 from February's revised estimate of 206,900 and down 1,000 from last March's estimate. Unemployment totaled 21,800 during March and was unchanged from February's revised estimate. The March unemployment rate was 9.5 percent and also remained unchanged from the prior month. March's unemployment rate for the state is 12.1 percent. The civilian labor force for March, at 228,900, is up 200 from February's total and up 3,900 over last March.

Store closures due to inclement weather and a local manufacturing plant closure will have an adverse effect on local employment during the coming month.

The Baton Rouge and Gonzales Job Service Offices served 2,218 individuals with new or renewal application, and placed 469 applicants in jobs during March.

The consumer price index for February 1983 for all urban consumers was 293.2 and for all urban wage and clerical workers 292.3 using base period 1967=100.

EMPLOYMENT AND PAYROLL TRENDS

Lafayette's nonagricultural employment in March stood at 99,600, an increase of 1,300 workers above February's level of 98,300 and 400 over a comparable period a year ago. The increase was in the nonmanufacturing areas such as wholesale and retail trade.

Estimated employment in manufacturing showed a slight increase from 5,400 to 5,300. This increase was in the nondurable goods segment.

Nonmanufacturing employment was estimated at 94,200 during March, up 1,200 over February's revised estimate. Construction showed a slight increase of 300 over the previous month and down 100 over a comparable period a year ago.

The other areas of estimated employment fluctuated very little and will probably remain stable.

Recent indicators show there is an increase in construction because of lower interest rates. This is happening in residential construction.

The lull in the oil industry is still affecting this area as we have a high number of rigs stacked. The price of oil today is not providing any incentive for people to drill. This has resulted in a high number of people being unemployed.

LAKE CHARLES
EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural wage and salary employment remained unchanged but manufacturing dipped by 200 from mid February while the nonmanufacturing segment rose by 200. During the twelve month period beginning in March 1982 nonagricultural wage and salary employment fell by 5,000. Manufacturing lost 1,300 workers and nonmanufacturing lost 3,700.

Manufacturing employment fell 200 below February and this loss occurred in Chemical and Petroleum Products. The 1,300 job loss from a year ago occurred chiefly in Chemical and Petroleum Products.

The nonfactory job count rose 200 over the month ago level to the current estimate of 50,900. Gains totalling 300 in Construction and Trade were reduced by the loss of 100 in Transportation and Public Utilities. Most of the nonfactory job loss during the past twelve months showed up in construction with a 2,800 loss. There were small losses in all other industry segments except Government.

Little change is expected in employment during the next 30 days but unemployment may continue to edge upward.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment remained unchanged at 51,700.

Manufacturing reflected a gain of 100 from the February estimate. The gain was in Durable Goods.

Nonmanufacturing, estimated at 44,300, was 100 below the February estimate.

Wholesale and Retail Trade was down by 100. Services also had a minimal loss of 100. Government was up by 100. All other segments were unchanged.

Total employment is expected to rise gradually as new retail establishments begin operatons. As weather conditions improve, construction should start moving upward. Unemployement is expected to remain high over the next 60 days.

NEW ORLEANS SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment in the New Orleans SMSA in March decreased to 508,500, down 800 from February and 10,000 below March of 1982. Manufacturing continued to be hurt by problems nationwide in scope. In nonmanufacturing, gains in some industries were offset by losses in other industries.

Manufacturing employment totaled 44,800 for March, down 200 from last month. Further layoffs at area shipyards and seasonal downturns in seafood processing caused the decrease. Compared to one year ago, manufacturing has lost 4,100 workers.

Nonmanufacturing lost 600 workers over the month, with the overall decrease spread through many segments. Transportation was lowered by a sizable downturn in water transportation and smaller employment cutbacks by local transit and air transportation. Wholesale trade diminished in the durable goods sector. Retail trade tapered off, with several industries showing minor reductions. Construction eased down, largely in employment by special trade contractors. Mining held steady. Finance, insurance, and real estate showed no significant change. More favorably, services pushed up, reflecting hires by the hotel-motel industry and private educational services as the spring semester moved further along. Local government displayed gains in city and parish administrative services.

Area production workers earned an average $350.76 a week in March, an increase of $5.54 from last month's average. The drop of $0.11 an hour in pay was more than offset by the addition of one hour and six minutes in average weekly hours. Compared, to one year ago, factory workers are earning an average $16.27 less a week.

Estimated unemployment in March increased to 54,400, up 800 from February. Local unemployment continues to rise sharply. Joblessness presently comprises 10.7 percent (not seasonally adjusted) of the labor force compared to 10.5 percent (revised) in February and 8.3 percent in March of last year. Recipients of regular unemployment insurance benefits numbered 19,131. Approximately 39.0 percent of the claimants were nonwhite; about 25.0 percent were female.

Nonagricultural wage and salary employment in the coming months is predicted to show normal seasonal changes. Mining and construction will be helped by better weather conditions. Less favorably, services will reflect the closing of the Fair Grounds racing season. Unemployment will probably rise with the pre-summer increase in the number of entrants and reentrants into the labor force.

SHREVEPORT SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salaried employment for the Shreveport SMSA showed a slight increase. The employment estimate for March is 143,700, up from the revised February estimate of 143,500. Total manufacturing employment, at 23,100 is up 100 from the February estimate and reverses the downward trend experienced throughout the past year.

The current employment estimate in nonmanufacturing rose slightly to 120,600, up from the revised February total of 120,500. Increases in construction and services employment were mostly offset by reductions in government and in transportation and public utilities employment.

The Shreveport SMSA has 17,700 production workers in manufacturing with average weekly earnings of $370.75, up from $369.61 last month and $326.27 one year ago. Average hourly earnings rose to $9.41, compared to $9.31 in February and $8.26 in March 1982. Average weekly hours remain nearly unchanged at 39.4, down from 39.7 last month and 39.5 one year ago.

The civilian labor force for this area is 159,200, with 139,900 employed and 19,300 unemployed. The current unemployment rate is 12.1 percent of the total labor force. This compares with an unemployment rate of 12.1 percent for the state.

The outlook for this area appears brighter. A gradual reduction in unemployment will likely begin during the next few months. Employment gains are expected in construction, in services - with the opening of the 1983 racing season, and in manufacturing as one firm plans to add approximately 1,200 production workers this summer.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment in Louisiana during April stood at 1,590,200, an increase of 1,800 workers over March, but 33,800 below the comparable figure a year ago. An upturn in several nonmanufacturing segments, including construction, transportation and public utilities, trade, and services, accounted for the higher April total for nonagricultural employment. Both the durable and nondurable goods segment of Louisiana's manufacturing industries were down from April levels.

1/ Includes Avoyelles, Grant, & Rapides parishes. 2/ Includes Ascension, East Baton Rouge, Livingston, and West Baton Rouge parishes. 3/ Lafayette Parish only. 4/ Calcasieu Parish only. 5/ Ouachita Parish only. 6/ Includes Jefferson, Orleans, St. Bernard, and St. Tammany parishes. 7/ Includes Bossier, Caddo, and Webster parishes.

This public document was published at a cost of 67 cents per copy by the Louisiana Department of Labor, Office of Employment Security, Research and Statistics Unit, P.O. Box 44094, Baton Rouge, Louisiana 70804. Its purpose is to disseminate information pertaining to the labor market developments and employment trends under the authority of Part 602.6, Title 20, Chap. V. of the Code of Federal Regulations. It was printed in accordance with the standards for printing by state agencies established pursuant to R.S. 43:31.

Estimated employment in the durable goods segment of manufacturing fell by 400 workers in the March to April reporting period. More business for sawmills and planing mills and increased production of millwork, plywood, structural members and wood containers all contributed to the increase in lumber and wood products employment for April. Cutbacks in the manufacture of household furniture and public building furniture resulted in a lower employment level for the furniture and fixtures industry. An upturn in demand for glass and glassware, concrete, gypsum, plaster products, abrasive and asbestos products, and certain miscellaneous nonmetallic minerals products accounted for the higher payroll levels in the stone, clay and glass products portion of the state's economy. Declining activity at iron and steel foundries and establishments that smelt and refine nonferrous metals was responsible for the lower employment level in primary metal industries. Machinery, except electrical, employment was down as a slowdown occurred in the production of construction and related machinery, general industrial machinery and certain miscellaneous machinery. Less business for firms that manufacture electric distributing equipment and certain miscellaneous electrical equipment and supplies accounted for payroll cutbacks in the electric and electronic equipment industry. Transportation equipment employment was down this month due to payroll cuts in the ship and boat building and repairing segment of manufacturing.

Estimated employment in nondurable goods for April was down by 300 below last month's level of 101,700. A downturn in food and kindred products was due in large part to a seasonal slackening in seafood canning. The lower employment level in apparel and other textile products resulted from decreased output of certain miscellaneous fabricated textile products. The paper and allied products industry payroll level rose for the current month mostly resulting from the settlement of a labor dispute. Employment in the printing and publishing segment of nondurable goods fell in April as newspaper publishers and commercial printing firms showed less activity. Lessened demand for industrial inorganic chemicals and for plastics materials and synthetics accounted for the drop in chemicals and allied products payrolls. An increase in petroleum and coal products industry employment was centered in the petroleum refining segment.

Louisiana's employment in nonmanufacturing industries during April was 1,398,500, an increase of 2,500 from the March figure of 1,396,000. Mining employment dropped below the previous month's level as a result of curtailment in production of crude petroleum and natural gas. Construction employment was up for the current month due in large part to increased activity in general building construction. Port activity increased during April, which was largely responsible for the increase in transportation and public utilities employment. More business for several eating and drinking establishments was especially instrumental in the higher number of employees exhibited by the trade segment of nonmanufacturing for the current month. The employment level in finance, insurance and real estate, at 79,700, was the same as last month. Seasonal hires in miscellaneous amusement and recreation services contributed to the employment gain for services in April. Government payrolls slipped below last month's figures due to a downturn in state government employment.

Average weekly earnings of Louisiana's 135,500 production workers in manufacturing increased from $381.84 in March to $387.25 in April, an increase of $5.41 and an increase of $3.61 above April of last year. Average hourly earnings were $0.16 higher in April than last month and $0.35 more than April a year ago. Weekly hours averaged 39.8 for the current month, down by 0.1 hours from March's figure. Average weekly earnings in communications and public utilities were up by $18.06 from March's level.

* Preliminary **Revised

(1) Includes Professional equipment and misc. manufacturing industries

(2) Includes Leather, Rubber and Textile products.

All estimates of Nonagricultural wage and salaried workers in this publication prepared in cooperation with U.S. Department of Labor, Bureau of Labor Statistics, and include all full time and part time workers who were employed during the pay period including the 12th of the month.

Estimated total employment in the state for April amounted to 219,200, a decrease of 8,900 below the March level of 228,100. The unemployment rate for April was 11.9 percent compared to 12.4 percent last month and 9.1 percent in April of last year. The comparable national unemployment rate for April was 10.0 percent compared to 10.8 percent in March and 9.2 percent in April of last year. Louisiana's civilian labor force moved from 1,843,600 in March to 1,843,300 in April, a decrease of 300. Total employment increased from 1,615,500 last month to 1,624,100 in April, an increase of 8,600.

Manufacturing employment is expected to increase slightly during the next two to three months due in part to seasonal influences. Certain segments of nonmanufacturing such as transportation and public utilities, trade and construction should show some expansion in the early summer months. Louisiana's unemployment rate will probably remain close to the current level for the next month.

(1) Geographic coverage of data now published for this area differs from the standard definition. Data also includes Avoyelles Parish.

EMPLOYMENT AND PAYROLL TRENDS

The Alexandria Area nonagricultural wage and salary employment increased in April to an estimated 54,300. This is an increase of 400 from the previous month, and 1,000 over April, 1982. This months gain was in nonmanufacturing with manufacturing remaining unchanged.

Although total manufacturing remained unchanged since last month, there was a gain and loss in its makeup. Lumber and wood products increased 100 with other durable goods decreasing 100.

Nonmanufacturing employment for April was estimated at 49,100. This is an increase of 400 from last month. The major gain was in construction with other increases found in transportation, communication and utilities, and retail trade. Compared to this month a year ago, nonmanufacturing employment has increased by 1,100. The gains were in most major segments except, finance, insurance and real estate remaining unchanged, and a reduction in contract construction.

Employment should rise slightly during the next thirty days. The unemployment rate should continue to decline during the next month.

BATON ROUGE SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural employment in the Baton Rouge SMSA was estimated at 207,800 during April, down 100 from March's revised estimate of 207,900 and up 200 above the total for last April. Manufacturing employment was down 200 while nonmanufacturing employment increased by 100.

Employment in manufacturing at 24,500 in April was down 200 from the revised March estimate and down 1,500 from last April. Employment in the durable goods segment of manufacturing had no change while nondurable goods was down 200. Chemicals and petroleum products are down 300 due primarily to the closure of a local aluminum plant. Other nondurable goods were up 100 due to more business in paper mills, except building paper mills and in miscellaneous plastic products.

Estimated employment in nonmanufacturing industries at 183,300 for April was up 100 from the revised March estimate of 183,200 and up 1,700 from April of last year. Mining, wholesale trade, finance, insurance and real estate, and government remained stable during the current period. Construction was down 400 and transportation and public utilities were down 100 due to storms and high water during April. Retail trade was up 400 due to more business in family clothing stores and in eating and drinking places. Service industries were up 200 due to increased activities in hospitals, miscellaneous business services and miscellaneous repair shops.

Total employment of Baton Rouge SMSA's residents was estimated at 207,600 during April, an increase of 800 from March's revised estimate of 206,800 and down 100 from last April's estimate. Unemployment totaled 22,000 during April, up 500 from March's estimate. The unemployment rate for April was 9.6 percent, down last months 9.8 percent revised rate. The state rates were 11.9 percent for April and 12.4 percent for March. The civilian labor force for April, at 229,600, is up 300 from March's total and up 4,500 over last April.

Average weekly earnings of Baton Rouge SMSA's 15,700 production workers in all manufacturing industries was $474.41 in April, up $0.79 over March's revised average. Average weekly hours at 39.9 were down 1.0 hour and average hourly earnings at $11.89 were up $0.31. Less overtime worked held the averages down this month.

Good weather and seasonal factors should help improve local employment during the coming months.

The Baton Rouge and Gonzales Job Service Offices served 1,945 individuals with new or renewal application, and placed 444 applicants in jobs during April.

The consumer price index for March, 1983 for all urban consumers was 293.4 and for all urban wage and clerical workers 293.0 using base period 1967=100.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural wage and salary employment for the Lafayette area was estimated at 98,000 for the month of April. This represents a 1,600 decrease over the previous month and a 600 increase over the same period of time a year ago. The largest percentage of the decrease is in the mining sector.

Construction and manufacturing remained the same while transportation and public utilities slipped from 7,900 to 7,800.

The wholesale and retail trade for April was 24,200 while the previous month showed 25,000. This decrease was due to the slowdown in the economy.

The remaining industries showed no significant change.

The layoffs in the oil industry as well as the supportive services continue to affect the employment situation in this area. The amount of rigs stacked remains high and the unemployment rate continues to grow as a result of this. Many of the leaders in this field predict no relief in sight for 1983.

Employment may increase in other areas because of seasonal factors and the increase of residential construction because of lower interest rates.

LAKE CHARLES
EMPLOYMENT AND PAYROLL TRENDS

Nonfarm payroll employment rose 1,200 over the mid-March level to the current estimate of 52,300. Nonmanufacturing gained 1,300 while manufacturing suffered a loss of 100. Over-the-year declines occurred, in both major groups, totalling 3,200.

Manufacturing employment edged downward 100 below the March level. This loss was centered in chemical and petroleum products. The current factory employment total falls 1,200 below the year ago level and all of this loss occurred in nondurable goods factories.

Employment in nonmanufacturing establishments increased from a total of 51,000 in March to the current estimate of 52,300. Construction increased by 600, transportation by 500, and trade and services each contributed gains of 100. When comparing the current nonfactory job total with the year ago total a loss of 2,000 jobs throughout all industry segments is evident.

The outlook for increasing employment is dim and unemployment is expected to edge upward as summer job seekers begin to enter the labor force.

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment, estimated at 51,800 during mid-April, was 100 below the March estimate.

Manufacturing was 200 below the March estimate. The loss was in durable goods. Nondurable goods was unchanged.

Nonmanufacturing, estimated at 44,600, was up 100 from the March estimate. Construction continued its gradual upturn with a gain of 200 for the month. Wholesale and retail trade declined by 100, the loss being in wholesale trade. All other segments were unchanged.

Over the next sixty days total employment should rise slightly. Unemployment is expected to rise as youths enter the labor force seeking summer employment as vacation begins at area educational institutions.

NEW ORLEANS SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment in the New Orleans SMSA in April moved down to 506,700, a level of 2,300 below March. Most of the decrease was in nonmanufacturing, where all industry divisions but one exhibited a reduction in employment. Manufacturing displayed downturns in both the durable goods and nondurable goods sectors.

Manufacturing employment dropped another 500 workers over the month to total 44,300. In the durable goods sector, machinery lost 100 workers due to less business and higher operating costs. Ship and boatbuilding continued its downturn, but at a slower pace than the previous few months. Seasonal downturns were responsible for the decrease in food and kindred products in the nondurable goods sector. Apparel and other textile products suffered because of the closing of another factory. Manufacturing employment is down 3,900 compared to one year ago.

Nonmanufacturing moved down by 1,800 over the month despite seasonal factors that normally help bring an overall upturn. Construction lost 300 workers, even though better weather for outside work had arrived. Mining tapered off, hampered by many problems nationwide in scope. Wholesale trade was lowered by a sizeable downturn in the durable goods sector. Retail trade held steady. Services reflected the closing of the Fair Grounds racing season along with smaller decreases in almost every other industry in this divison. Partly offsetting cutbacks were hires by the large new Sheraton New Orleans Hotel. Transportation and public utilities exhibited scattered small decreases. Federal government showed a small reduction in employment in the "other" segment. More favorably, real estate added workers.

Area factory workers earned an average $341.94 in April, $5.97 below March's average. Average weekly hours dropped one hour which more than offset the eight cent increase in average hourly earnings. Inclement weather during the month was partially responsible for the decrease in weekly hours. Compared to one year ago, average weekly earnings are down by $20.92.

Estimated unemployment in April moved down to 53,901, a decrease of 1,984 from the March level. Unemployment currently accounts for 10.6 percent (not seasonally adjusted) of the labor force compared to 11.0 percent (revised) in March and 8.5 percent in April of last year. Beneficiaries of regular unmeployment insurance totaled 18,099. About 40 percent of the claimants were nonwhite; approximately 27 percent were female.

Nonagricultural wage and salary employment in the coming months is predicted to show some overall gain. Much will be dependent on developments in the national economy. Mining and construction will be favored by better weather conditions. Preparations for the 1984 World's Fair are expected to benefit construction strongly. Unemployment will likely rise with the summer increase in the number of entrants and reentrants into the labor force.

Data in the average earnings table are for approximately 18,000 production workers and are computed on a "gross" basis and reflect overtime, late shift work and incentive rates.

SHREVEPORT SMSA

EMPLOYMENT AND PAYROLL TRENDS

The total nonagricultural wage and salaried employment in the Shreveport SMSA rose slightly to 144,400, up from 144,100 last month, but remains well below the year ago estimate of 151,800. Manufacturing is unchanged from last month, while nonmanufacturing employment increased 300.

Employment in manufacturing, at 23,100, is unchanged from last month and remains 3,700 less than April 1982. Small gains in lumber and wood products and other durable goods were offset by losses in metals and machinery employment.

Nonmanufacturing employment rose from 121,000 last month to 121,300, but still 3,700 less than the estimate of a year ago. Employment estimates show a delcine in construction, finance, insurance and real estate and government, but gains in transportation and public utilities, trade and services were enough to make up for the losses.

The 18,000 production workers in this area had average weekly earnings of $383.76, compared to $368.54 for last month and $320.05 for April 1982. Average weekly hours increased to 40.1, up from 39.5 last month and 38.7 one year ago. Average hourly earnings, at $9.57, shows a gain from $9.33 in March and $8.27 one year ago.

The civilian labor force for the area is 159,900, including 141,000 employed and 18,900 unemployed. The rate of unemployment is 11.8 percent, compared with 12.2 percent last month and 8.0 percent in April 1982.

Total employment for this area is expected to start a gradual upward trend as general economic conditions improve. New and reentrants into the labor force will cause a sharp increase in total unemployment in June before dropping later in the summer months.

EMPLOYMENT AND PAYROLL TRENDS

Louisiana's nonagricultural employment in May stood at 1,587,900, a decrease of 1,700 workers below April's level and 34,900 below the comparable period a year ago. A downturn in certain nonmanufacturing segments, including mining, construction, transportation and public utilities, and government, accounted for May's lower total nonagricultural employment. The state's total manufacturing employment was unchanged from last month's figure as a decline in the durable goods segment was offset by an equal gain in nondurable goods employment.

1/ Includes Avoyelles, Grant, & Rapides parishes. 2/ Includes Ascension, East Baton Rouge, Livingston, and West Baton Rouge parishes. 3/ Lafayette Parish only. 4/ Calcasieu Parish only. 5/ Ouachita Parish only. 6/ Includes Jefferson, Orleans, St. Bernard, and St. Tammany parishes. 7/ Includes Bossier, Caddo, and Webster parishes.

This public document was published at a cost of 67 cents per copy by the Louisiana Department of Labor, Office of Employment Security, Research and Statistics Unit, P.O. Box 44094, Baton Rouge, Louisiana 70804. Its purpose is to disseminate information pertaining to the labor market developments and employment trends under the authority of Part 602.6, Title 20, Chap. V. of the Code of Federal Regulations. It was printed in accordance with the standards for printing by state agencies established pursuant to R.S. 43:31.

During May, total employment in the durable goods segment of manufacturing decreased by 600 workers. Lumber and wood products employment was up slightly for the current month due largely to increased production of millwork, plywood and structural members and increased activity at sawmills and planing mills. Increased manufacture of household furniture and public and related furniture accounted for the upturn in the furniture and fixtures industry. Employment edged upward in primary metal industries as the need for primary nonferrous metals increased. A dropoff in the manufacture of fabricated structural metal products was responsible for the decline in primary metal industries payrolls. Contributing to a lower employment level for the machinery, except electrical, industry was a decline in the production of fabricated structural metal products. Transportation equipment, with a drop in payrolls of 400 workers, showed the greatest change from last month's employment levels. This was due to a drop in ship and boat building and repairing activity. Less demand for certain miscellaneous manufactured products largely accounted for the cutback in workers for the other durable goods segment of manufacturing.

Employment in the nondurable goods segment of manufacturing was 101,800 for May, an increase of 600 from the April figure. The most significant factor in this increase occurred in food and kindred products due to a seasonal upturn in seafood canning. Chemicals and allied products and printing and publishing both rose slightly while an offsetting decrease occurred in other nondurable goods due largely to a temporary shutdown at an establishment in the state's leather and leather products industry.

Estimated employment in nonmanufacturing industries for the current month was 1,700 below last month's level of 1,398,300 and 19,600 below the comparable period a year earlier. Less demand for crude petroleum and natural gas led to decreases in oil and gas extraction employment for May. Construction moved down by 500 employees due in large part to payroll cutbacks in heavy construction and electrical work. Transportation and public utilities payrolls fell mostly as a result of less activity at the state's ports. Trade payrolls in May were up largely as a result of increased business for Louisiana's eating and drinking establishments. Employment gains at banks and credit agencies other than banks were significant in the upturn of finance, insurance and real estate employment. Among the segments of services contributing to payroll additions in that segment of nonmanufacturing were commercial sports, due to seasonal upturns at two of the state's racetracks, and miscellaneous amusement and recreation services, also due to seasonal influences. Estimated government employment this month was lower as a result of declines in both state and local government employment.

Average weekly earnings of Louisiana's 135,300 production workers in manufacturing increased from $387.08 in April to $389.85 in May, an increase of $2.77 and an increase of $4.22 above May of last year. Average hourly earnings were $0.07 higher in May than last month and $0.55 cents higher than May a year ago. Weekly hours, at 39.7, were unchanged from April's figure. Average weekly earnings in communications and public utilities were down by $25.86 from April.

Estimated total unemployment during May amounted to 231,700, an increase of 5,800 above the April level of 225,900 and 56,100 higher than the May a year ago figure. The unemployment rate for May was 12.5 percent, an increase of 0.3 percentage points higher than last month's rate and 3.0 percentage points above May of last year. The comparable national unemployment rate for May was 9.8 percent compared to 10.0 percent in April and 9.1 percent for May a year ago. Louisiana's civilian labor force increased from 1,849,500 in April to 1,852,100 in May, a gain of 2,600. The state's total employment went from 1,623,600 last month to 1,620,400 for the current month, a decrease of 3,200 and 54,300 fewer than May a year ago.

We can expect a significant increase in unemployment in the upcoming month due to the influx of students into the labor force. Manufacturing employment should increase during the early summer months due in part to seasonal influences. Nonmanufacturing segments such as construction and trade are expected to show employment growth over the next few months.

EMPLOYMENT AND PAYROLL TRENDS

The Alexandria SMSA nonagricultural wage and salary employment increased in May to an estimated 54,300. This was an increase of 100 from the previous month, and 700 more than May 1982. This months gain was in nonmanufacturing with manufacturing remaining unchanged.

Manufacturing employment, unchanged since the previous month, has declined 100 from this month a year ago. The decline was in durable goods, with a slight gain in nondurable goods.

Nonmanufacturing employment for May was estimated to be 49,100. This was an increase of 100 over April. The gain was in the construction industry. Total retail trade remained unchanged, however there was a slight gain in eating and drinking places, but a corresponding decrease in auto dealers and service stations. Compared to this month a year ago, nonmanufacturing employment has increased by 800. The gains were in each major segment except finance, insurance and real estate.

Employment should decrease during the next thirty days and the unemployment rate should increase. These changes will be due to the influx of both students and some school personnel into the labor market.

BATON ROUGE SMSA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural employment in the Baton Rouge SMSA was estimated at 207,400 during May, an increase of 200 over April's revised estimate of 207,200 and up 500 over the total for last May. Total manufacturing had no change during the current period while nonmanufacturing employment increased by 200.

Employment in manufacturing at 24,300 in May was unchanged from the revised April estimate; however, in the nondurable goods segment, chemicals and petroleum products lost 100 due to less demand for industrial organic chemicals and in industrial inorganic chemicals. Other nondurable goods gained 100 during the current period due to more business in paper mills except building paper mills and in miscellaneous plastic products.

Estimated employment in nonmanufacturing industries at 183,100 increased 200 from the revised April estimate of 182,900 and up 2,000 from May of last year. Mining, construction, transportation and public utilities, and finance, insurance and real estate had no change during the current period. Retail trade was up 200 due to increased business in department stores and in eating and drinking places. Service industries were up 300 due to more business in photographic studios, portrait, miscellaneous business services and increased activity in hospitals and in job training and vocational rehabilitation services.

Total employment of Baton Rouge SMSA's residents was estimated at 206,200 during May, a decrease of 800 from April's revised estimate of 207,000 and down 1,100 from last May's estimate. Unemployment totaled 23,800 during May, up 900 over April's estimate. The unemployment rate for May stood at 10.3 percent, up from last month's 10.0 percent revised rate. The state rates were 12.5 percent in May and 12.2 percent in April. The civilian labor force at 230,000 for May is up 100 over last month and up 3,600 over the total for May of last year.

Average weekly earnings of Baton Rouge SMSA's 15,600 production workers in all manufacturing industries was $474.00 in May, up $17.75 over April's revised average. Average weekly hours at 40.0 were up 0.6 hours and average hourly earnings at $11.85 were up $0.27. Increases were due to more overtime worked at premium pay.

Seasonal factors that include student workers seeking summer employment during the coming months will cause an increase in the unemployment and unemployment rate during the summer.

The Baton Rouge and Gonzales Job Service Offices served 1,965 individuals with new or renewal application, and placed 338 applicants in jobs during May.

The consumer price index for April, 1983 for all urban consumers was 295.5 and for all urban wage and clerical workers 294.9 using base period 1967=100.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment in Louisiana during May stood at 97,300 which is a 700 decrease from the previous month but 200 increase over the same period of time last year.

Mining for May stood at 18,000 which is a 700 decrease over the previous month and a 1,700 decrease over the same period of time a year ago.

The remaining cells have changed very little over the figures of the previous month.

The most noticeable decrease was in mining. The continued lack of drilling activities has continued to affect the many service companies that support the oil industry.

The recent leasing of offshore tracts in the Gulf of Mexico has increased optimism that a turnaround is in the near future.

An increase in the unemployment rate is likely due to the influx of students into the labor force this summer. Some will find work but a greater majority of them will find that jobs are not available in the situation that the economy is in at the present time. The turnaround does not look like it will be in 1983. The rate should drop towards the end of the summer.

LAKE CHARLES
EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment fell 800 from mid-April to the current estimate of 61,200. Factory employment rose 100 while nonfactory employment fell by 900. During the past twelve months the nonfarm job total dropped by 3,100. This loss was shared by both manufacturing and nonmanufacturing establishments.

Employment in manufacturing edged upward 100 from last month. Durable goods declined by 100 while nondurable goods gained 200. The factory decline from May 1982 amounted to 1,100 jobs. Most of this loss occurred in nondurable goods as a result of reduced product demand fostering employment reductions.

The nonfactory job total fell by 900 since mid-April and nearly all of the loss occurred in construction. Over the year losses in most nonfactory establishments totalled 2,000. Sixteen hundred of this loss was centered in construction as plant expansion has nearly ended.

The outlook is for higher unemployment as summer job seekers join the area labor force. Little change is expected in area employment in the next 30 days.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural wage and salary employment rose to 52,100, a gain of 300 from the April estimate.

Manufacturing showed a gain of 200 employees. This was equally divided between durable and nondurable goods.

Nonmanufacturing showed a gain of 100 over the month. Only wholesale and retail trade showed a gain. All other segments were stable.

The next sixty day period will reflect the summer vacation period at local educational facilities. Employment should be relatively stable or show a slight increase. Unemployment over the same period will rise as youths, both graduates and nongraduates, enter the labor force.

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment in the New Orleans SMSA in May decreased to 505,500, down 2,100 from April. Manufacturing continued to be hurt by problems nationwide in scope. Nonmanufacturing showed reductions in every industry division except trade and construction.

Manufacturing employment dropped to 44,100 in May, 200 less than last month and 4,000 less than one year ago. Employment at area shipyards continued to fall with the layoff of 300 more workers. A small increase in machinery was the only gain in manufacturing as the other industries held steady over the month.

Nonmanufacturing exhibited a decrease of 1,900 spread through most major sectors. The largest downturn was in services, which reflected seasonal cutbacks in private educational services and a downward adjustment in employment by private health services that was probably temporary in nature. Government showed retrenchments in all three major segments. Water transportation dropped to the lowest level in several years. Mining continued its slow downward trend. Insurance was lowered by layoffs by carriers as well as agents. More favorably, wholesale trade pushed up in the durable goods group. Partly offsetting the gain was a decrease in the nondurable goods group. Retail trade benefitted from the opening of new general merchandise stores and building material outlets, which barely offset decreases elsewhere. Construction was boosted by a gain in heavy construction.

Average weekly earnings totaled $329.77 in May for the 29,600 area production workers. This represents a drop of $28.25 from the April average. Shorter work schedules caused the drop of 2 hours and 42 minutes in average weekly hours and average hourly earnings decreased by 10 cents. Compared to one year ago, factory workers are earning an average $33.54 less.

Estimated unemployment in May pushed up to 56,000, a level 400 above April. A decrease in nonagricultural wage and salary employment along with a normal seasonal increase in the number of entrants and reentrants into the labor force accounted for the change. Joblessness presently comprises 11.1 percent (not seasonally adjusted) of the labor force compared to 10.9 percent (revised) in April and 8.7 percent in May of last year. Recipients of regular unemployment insurance benefits numbered 17,763. Approximately 40 percent of the claimants were nonwhite; about 27 percent were female.

Nonagricultural wage and salary employment in the coming months will hopefully show some overall increase. Mining and construction will benefit from better weather conditions. Preparations for the 1984 World's Fair should favor many segments of the local economy. Many changes in this area in the near future will depend on developments in the national economy. Unemployment will probably rise as youth leave school for the labor market.

SHREVEPORT SMSA

EMPLOYMENT AND PAYROLL TRENDS

The nonagricultural wage and salaried employment in the Shreveport SMSA increased from the revised April total of 144,600 to 145,500 for May. Manufacturing employment is 200 less than the estimate for last month and the nonmanufacturing total is 1,100 more than the revised April estimate.

Employment in manufacturing at 22,800, is down 200 from the April estimate. Most of this decline was in durable goods with less demand for oilfield machinery and equipment. Employment in nondurable goods is unchanged from last month and one year ago. Total manufacturing remainds 3,600 below the May, 1982 estimate.

Nonmanufacturing employment had a substantial increase from last month. The current estimate of 122,700 is 1,100 more than the revised April figure, but 4,400 less than May, 1982. During the past month a slight gain occurred in construction, transportation and public utilities, finance, insurance and real estate, with a substantial 1,300 increase in services. Most of this increase (950) was in amusement and recreation services, with medical services contributing a moderate amount, and slight increases in the other segments of the services industries.

Average weekly earnings of 17,900 production workers in the area were $368.68, a slight decline from $373.18 last month, but up from the year ago weekly average of $327.26. Average weekly hours at 39.6, are nearly unchanged from the previous month, and down slighlty from 40.0 in May, 1982. The average hourly earnings dropped from $9.40 last month to $9.31. Average hourly earnings for May, 1982 were $8.19.

The civilian labor force for the Shreveport SMSA is 161,100, comprised of 141,400 employed and 19,700 unemployed. The current unemployment rate is 12.2 percent, up from the revised 12.0 percent in April.

While the outlook for general economic conditions appears brighter, high unemployment is expected to continue in the SMSA. New and reentrants into the labor force in June will more than offset gains in total employment. The unemployment rate for the month of June is expected to exceed 13 percent.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment in Louisiana during June stood at 1,585,000, a decrease of 2,800 employees from last month and 31,300 less than June of last year. The state's nonmanufacturing industries, especially construction, services and government, accounted for the lower employment level for the current month. The durable goods sector of the state's manufacturing industries experienced a decline from last month's level. A seasonal increase in food and kindred products was largely responsible for the higher employment level of nondurable goods.

1/ Includes Avoyelles, Grant, & Rapides parishes. 2/ Includes Ascension, East Baton Rouge, Livingston, and West Baton Rouge parishes. 3/ Lafayette Parish only. 4/ Calcasieu Parish only. 5/ Ouachita Parish only. 6/ Includes Jefferson, Orleans, St. Bernard, and St. Tammany parishes. 7/ Includes Bossier, Caddo, and Webster parishes.

This public document was published at a cost of 67 cents per copy by the Louisiana Department of Labor, Office of Employment Security, Research and Statistics Unit, P.O. Box 44094, Baton Rouge, Louisiana 70804. Its purpose is to disseminate information pertaining to the labor market developments and employment trends under the authority of Part 602.6, Title 20, Chap. V. of the Code of Federal Regulations. It was printed in accordance with the standards for printing by state agencies established pursuant to R.S. 43:31.

Employment in the durable goods segment of manufacturing, estimated at 88,900 for June, was 500 lower than the May level of 89,400 and 8,800 below the year ago figure. A decrease in the production of millwork, plywood and structural members was primarily responsible for the downturn in lumber and wood products employment. A labor dispute at a firm in the concrete, gypsum and plaster products segment of the state's stone, clay and glass products industry was instrumental in the decrease of employees in that industry. Employment fell slightly in the primary metal industries as the need for primary nonferrous metals decreased. Fabricated metal products employment was down due to slowdowns in the production of fabricated structural metal products. Machinery, except electrical, employment went down from May's level largely as a result of cutbacks in the manufacture of construction and related machinery. An increase in activity in the guided missiles and space vehicles and parts industry and more business at the state's ports pushed employment in the transportation equipment industry above last month's level.

Nondurable goods employment, estimated at 102,500, was 700 more than last month, but 4,900 below the June a year ago figure. The primary force in this month's increase of nondurable goods employment was a seasonal advance in food and kindred products due to increased activity in seafood canning. Curtailments in the manufacture of paper caused paper and allied products employment to edge downward in June. Lessened demand for industrial inorganic and industrial organic chemicals accounted for the drop in chemicals and allied products payrolls. A decrease in petroleum and coal products industry employment was centered in the petroleum refining segment. An increase occurred in other nondurable goods employment due largely to the reopening after a temporary shutdown of an establishment in the state's leather and leather products industry.

Estimated employment in nonmanufacturing industries, at 1,393,600 for the current month, was 3,000 below last month's level of 1,396,600 and 17,600 lower than June a year ago. Mining employment was down as a result of a slowdown in the exploration for oil and gas. A downturn in general building construction and in heavy construction contributed most to the lower construction payrolls in June. Port activity increased during June, which was largely responsible for the higher transportation and public utilities employment for the current month. Trade employment moved up due mostly to more business for the wholesale segment. Banking and real estate were among the areas contributing to the increase in finance, insurance and real estate employment. Seasonal losses in educational services employment were instrumental in the lower payrolls for services this month. Government employment for June was lower than May's level primarily as a result of a seasonal decrease in state education for the summer months.

Average weekly earnings of Louisiana's 135,200 production workers in manufacturing increased from $391.42 in May to $395.20 in June, an increase of $3.78 and an increase of $6.66 above the comparable period a year ago. Average hourly earnings were ten cents lower in June than last month, but $0.37 cents more than June of last year. Weekly hours averaged 40.7 for the current month, up by 0.8 hours from May's figure.

Estimated total unemployment in the state for June amounted to 241,200, an increase of 5,600 over the May level of 235,600. The unemployment rate for June was 12.8 percent compared to 12.7 percent last month and 10.7 percent in June of last year. The comparable national unemployment rate for June was 10.2 percent compared to 9.8 percent in May and 9.8 percent in June a year ago. Louisiana's civilian labor force went from 1,859,200 in May to 1,880,700 in June, an increase of 21,500. Total employment for Louisiana moved from 1,623,600 in May to 1,639,500 in June, an increase of 15,900.

Louisiana's unemployment rate should experience a decline during the next few months. Louisiana's manufacturing employment is expected to drop next month. Certain segments of nonmanufacturing such as trade and construction may show some growth over the next two or three months. Government employment is expected to fall in July.

EMPLOYMENT AND PAYROLL TRENDS

The Alexandria LMA nonagricultural wage and salary employment decreased in June to an estimated 54,000. This was a decline of 500 from the previous month, but an increase of 800 from this month a year ago. This months major loss was in nonmanufacturing.

Manufacturing employment decreased 100 since the previous month and has declined 200 from this month a year ago. These declines were in other durable goods, with the lumber and wood products showing a slight gain over the year.

Nonmanufacturing employment during June was estimated at 48,800. This was a decrease of 400 from the previous month. The construction, retail trade and federal government segments had slight gains of 100 each, but were offset by the losses in other services and local government. The estimated reductions were due primarily to educational facilities closing for the summer months. Compared to this month a year ago, nonmanufacturing employment has increased by 1,000. The major gains were in the retail trade and services industries.

Total employment should remain relatively constant during the next thirty days with the unemployment rate decreasing.

BATON ROUGE AREA

EMPLOYMENT AND PAYROLL TRENDS

Agricultural employment in the Baton Rouge Area was estimated at 205,500 during June, a decrease of 2,400 from May's revised estimate of 207,900 and down 200 from the total for last June. Total manufacturing increased 100 and nonmanufacturing was down 2,500 during the current period.

Employment in manufacturing at 24,300 in June was up 100 over the May revised estimate of 24,200. Durable goods had no change and nondurable goods increased by 100 due to more business in paper mills, except building paper mills, and in miscellaneous plastic products.

Estimated employment in nonmanufacturing industries at 181,200 was down 2,500 during June; however, it was up 1,300 over June of last year. Mining, retail trade, and finance, insurance and real estate had no change during the current period. Construction was up 100 due to more business in plumbing, heating (except electric), and air conditioning, and in masonry, stonework, tile setting, and plastering. Wholesale trade employment was up 100 due to more activity in electrical goods. Services increased by 300 due to more business in hotels, motels, and tourists courts, in miscellaneous repair shops and related services, and in legal services; and to a seasonal increase in job training and vocational rehabilitation services.

Total employment of the Baton Rouge Area's residents was estimated at 208,100 during June, an increase of 1,100 from May's revised estimate of 207,000 and up 400 over last June's estimate. The unemployment estimate of 25,800 for June was up 1,400 over May 's total and up 3,900 over last June. The unemployment rate at 11.0 percent for June was up from last month's revised 10.5 percent. State rates were 12.7 percent in June and 12.8 percent in May. The local civilian labor force stood at 233,900 in June, up 2,500 from May and up 4,300 over June of last year.

Average weekly earnings of the Baton Rouge Area's 15,600 production workers in all manufacturing industries was $460.69 in June, up nine cents over May's revised average. Average weekly hours at 40.2 were up 0.9 hours and average hourly earnings were down $0.26. The changes were due to more overtime worked by lower paid employees.

Unemployed summer job seekers expected to continue increasing the unemployment rate during the coming month.

The Baton Rouge and Gonzales Job Service Offices served 2,727 individuals with new or renewal application, and placed 373 applicants in jobs during June.

The consumer price index for May, 1983 for all urban consumers was 297.1 and for all urban wage and clerical workers 296.3 using base period 1967=100.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment in the Lafayette LMA during June stood at 97,200 a decrease of 100 workers below the May level and 600 below a comparable period a year ago.

Nonmanufacturing remained at the same level as the previous month but decreased 600 workers over the same period a year ago. This decrease was centered in mining and construction.

There was a sizeable drop in government employment during June due to the layoff of non-faculty personnel in state schools.

Other segments in the series remained relatively stable.

The Lafayette LMA unemployment rate is expected to remain at high levels during the summer months. Very little relief is expected in the near future because of the continued slowdown in the oil industry. All areas of the economy have been affected as a result of this restriction of drilling activities. Most oil analyst predict that when a recovery occurs it will be a gradual one.

LAKE CHARLES
EMPLOYMENT AND PAYROLL TRENDS

Employment on area nonfarm payrolls continued the declining trend begun in May by dropping 500 to the June estimate of 60,800. The job total in the factory and nonfactory sectors dropped by 200 and 300 respectively. Over-the-year losses totalled 1,100 in manufacturing and 1,800 in nonmanufacturing.

Manufacturing employment, currently estimated at 9,700, dipped 200 below the month ago level. This loss was centered in chemical and petroleum products. During the twelve month period beginning in June 1982 factory employment declined 1,100 and most of this was also centered in chemical and petroleum products.

Employment in the nonfactory sector fell 300 below the mid-May level to the June estimate of 51,100. Two hundred of this loss was in construction and other losses totalling 300 were moderated by gains of 200 in transportation, communications and utilities, and finance, insurance & real estate. During the past twelve months declines occurred throughout the entire nonfactory industry spectrum resulting in 1,800 fewer employed.
Little change is expected in employment in the next 30 days.

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment declined by 200 to an estimated 51,800 during mid-June.

Manufacturing, estimated at 7,400, was up 100 from the May estimate. The gain was in non-durable goods.

Mining and construction followed the normal trend with gains of 100 each. Wholesale and retail trade was down by 100. Services experienced a gain of approximately 300. Health services had a gain of 100, other services were up as local recreational facilities hired for summer outdoor programs and special events. Government reflected the beginning of summer vacation in educational institutions. All other segments were unchanged.

Employment is expected to be relatively stable with only a slight upward move. Unemployment will remain high.

Data in the average earnings table are for approximately 30,200 production workers and are computed on a "gross" basis and reflect overtime, late shift work and incentive rates.

NEW ORLEANS AREA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment in the New Orleans Labor Makret Area in June decreased to 502,400, a level of 3,800 below May. Nonmanufacturing was lowered by decreases in most industry divisions. The largest of these were seasonal in nature. Small gains in manufacturing prevented a larger overall downturn.

Manufacturing employment totaled 44,400 for June, an increase of 300 over the May total. Transportation equipment increased by 400 workers, 200 in ship and boatbuilding and repairing. Seasonal increases in seafood processing caused the rise in food and kindred products. Less favorable were layoffs in fabricated metal products and the other durable goods sector. Compared to one year ago, manufacturing employment has decreased by 3,400 workers.

Nonmanufacturing exhibited a decrease of 4,100, largely seasonal in nature. Services were lowered by normal early summer downward adjustments in private educational services. Business services showed a sizeable decrease. Partly offsetting downturns, private health services pushed up strongly. Government employment was reduced mainly by seasonal downturns in state institutions of higher learning. Insurance and real estate effected layoffs. Transportation and public utilities displayed a small downturn in almost every industry. Mining also tapered off. More favorably, retail trade was boosted by the openings of new stores. Wholesale trade held steady. Construction moved up, taking advantage of good weather conditions.

Production workers in the New Orleans area earned an average $345.98 in June, $9.01 over last month. The increase of one hour and 18 minutes in average weekly hours more than offset the drop of seven cents in average hourly earnings. Average weekly earnings are $14.77 less than this same time last year.

Estimated unemployment in June increased to 57,300, up 500 from May. The early summer rise in the number of entrants and reentrants into the labor force was mostly responsible. An expansion of the labor force caused the percentage of the unemployed to remain the same. Current joblessness accounts for 11.2 percent (not seasonally adjusted) of the labor force compared to 11.2 percent (revised) in May and 9.7 percent in June of last year. Beneficiaries of regular unemployment insurance totaled 16,273. About 40.0 percent of the claimants were nonwhite; approximately 28.0 percent were female.

Nonagricultural wage and salary employment in the coming months will probably show some overall gain. Mining and construction will benefit from summer weather conditions. Preparations for the 1984 World's Fair will stimulate many industries. Many other changes in this area in the near future will depend on change in the national economy. Unemployment will hopefully show some overall decrease as many persons who recently entered and reentered the labor force will withdraw to return to school and for other reasons.

SHREVEPORT AREA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary workers in the Shreveport Labor Market Area totaled 146,300, an increase from the revised May estimate of 145,700, but remains 6,500 below the June 1982 total. Manufacturing employment is unchanged from the revised May estimate. The slight employment increase in nonmanufacturing over the previous month occurred in construction, services and government.

Manufacturing employment, estimated at 22,910, is unchanged from last month. In the durable goods segment, the small gain in lumber and wood products during the past month was lost with the decline in metal and machinery employment. Total employment in the nondurable goods segment remains stable. The slight increase in other nondurable goods was eliminated when an equal number was lost in printing and publishing.

Manufacturing employment rose from 122,800 last month to 123,400. Equal increases occurred in construction, services and government, while finance, insurance and real estate gained 100 over the past month. Wholesale and retail trade employment fell 100 during the past month.

The average weekly earnings of 17,800 production workers were $370.40, up from $369.57 for the previous month and $340.31 one year ago. Average weekly hours increased from 39.4 in May to 39.7 and falls below 41.2 for June, 1982. Average hourly earnings dropped slightly to $9.33, down from $9.38 last month and $1.07 more than the June, 1982 average hourly earnings.

The Shreveport Labor Market Area has a civilian labor force of 165,100, including 144,600 employed and 20,500 unemployed. The unemployed represents 12.4 percent of the total labor force and reflects the addition of new and reentrants into the labor force.

The outlook in this area is for gradual employment growth. A manufacturer of durable goods is adding approximately 1,200 production workers. Back to school activity will stimulate retail trade and the opening of the 1983-84 school year in August will increase employment in local and state government. Unemployment should fall below 12.0 percent in September.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment in Louisiana during July stood at 1,583,500, a decrease of 1,500 workers from June and 24,100 below the comparable period a year ago. The decrease was centered in the services and government segments of nonmanufacturing due mostly to seasonal losses in education employment. An increase in durable goods payrolls was responsible for the higher employment level in the state's manufacturing industries.

1/ Includes Avoyelles, Grant, & Rapides parishes. 2/ Includes Ascension, East Baton Rouge, Livingston, and West Baton Rouge parishes. 3/ Lafayette Parish only. 4/ Calcasieu Parish only. 5/ Ouachita Parish only. 6/ Includes Jefferson, Orleans, St. Bernard, and St. Tammany parishes. 7/ Includes Bossier, Caddo, and Webster parishes.

This public document was published at a cost of 67 cents per copy by the Louisiana Department of Labor, Office of Employment Security, Research and Statistics Unit, P.O. Box 44094, Baton Rouge, Louisiana 70804. Its purpose is to disseminate information pertaining to the labor market developments and employment trends under the authority of Part 602.6, Title 20, Chap. V. of the Code of Federal Regulations. It was printed in accordance with the standards for printing by state agencies established pursuant to R.S. 43:31.

Estimated employment in the durable goods segment of manufacturing increased by 2,100 workers in the June to July reporting period. Employment was up in the lumber and wood products industry as a result of more business, especially at saw mills and planing mills. Increased demand for household furniture and for public building and related furniture accounted for the upturn in furniture and fixtures employment. Stone, clay and glass products employment moved up largely due to an increase in the production of glass and glassware. More demand for fabricated structural metal products, ordnance and accessories, and certain miscellaneous fabricated metal products contributed to the higher payrolls in the fabricated metal products industry. A cutback in the production of general industrial machinery and equipment was largely responsible for the decline in machinery, except electrical, employment. Transportation equipment payrolls were significantly higher in July mainly due to increased production in the motor vehicle and motor vehicle equipment segment.

Estimated employment in nondurable goods for July was 900 lower than in the prior month and 4,700 lower than the comparable figure a year earlier. Food and kindred products employment declined in July due mostly to a seasonal slackening in seafood canning. Production cutbacks at paperboard mills accounted for the drop in paper and allied products employment. The chemicals and allied products industry experienced lower payrolls this month largely as a result of low demand for industrial inorganic chemicals. Increased production of refined petroleum and of paving and roofing materials resulted in a higher employment level for the petroleum and coal products industry. A temporary shutdown at an establishment in the state's leather and leather products industry was primary in the lower employment level for other nondurable goods.

Nonmanufacturing employment for July, at 1,390,900, was down by 2,700 from June's level and 14,000 lower than July a year ago. Increased activity in the production of crude petroleum and natural gas was responsible for the higher employment level in mining this month. An upturn in general building construction and an increase in business for plumbing, heating and air conditioning contractors largely accounted for the increase in construction payrolls. An increased need for marine cargo handling pushed the employment level upward in transportation and public utilities. Both the wholesale and retail segments were responsible for trade's employment upturn. Growth in insurance and in real estate employment contributed to the increase in the finance, insurance and real estate segment of nonmanufacturing. Decreases in educational services were significant in the downward fluctuation of services employment. Government employment in July was down due in large part to a seasonal decrease in local education payrolls.

Average weekly earnings of Louisiana's 136,200 production workers in manufacturing increased from $395.20 in June to $402.52 in July, an increase of $7.32 and an increase of $16.55 above the comparable period a year ago. Average hourly earnings were $0.18 higher in July than last month and $0.43 more than July of last year. Weekly hours averaged 40.7 for both the current month and the previous month.

Estimated total unemployment in the state for July amounted to 233,900, a decrease of 12,600 from the June level of 246,500. Louisiana's civilian labor force moved from 1,886,000 in June to 1,892,400 in July, an increase of 6,400. Total employment increased from 1,639,500 last month to 1,658,500 for the current month. A considerable decrease in the number of entrants and reentrants into the job market and a drop of about 5,000 individuals filing for U. I. benefits contributed to the fall in Louisiana's unemployment rate from 13.1 percent in June to 12.4 percent in July. The comparable national unemployment rate for July was 9.4 percent compared to 10.2 percent in June and 9.8 percent in July of last year.

The state's unemployment rate is expected to stay fairly stable next month. Certain segments of nonmanufacturing, in particular construction and trade, should edge upward in August. Employment in Louisiana's manufacturing industries may slip below the present level.

EMPLOYMENT AND PAYROLL TRENDS

The Alexandria LMA nonagricultural wage and salary employment decreased in July to an estimated 53,800. This was a decline of 200 from the previous month, but an increase of 600 from this month a year ago. This months loss was in the nonmanufacturing industries.

Manufacturing employment estimated at 5,300 had an increase of 100 over the past month, and a decrease of 100 this month a year ago. Both the gains and lossess were in the durable goods industries.

Nonmanufacturing employment during July was estimated to be 48,500. This was a decrease of 300 from the previous month. Losses were in the industries of government and services, which were due primarily to the closing of educational facilities for the summer. Compared to this month a year ago, nonmanufacturing employment has increased by 700. The major gains were in the retail trade and services industries.

During the next thirty days the unemployment rate should decrease with total employment remaining fairly constant.

BATON ROUGE AREA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural employment in the Baton Rouge LMA was estimated at 205,600 during July, up 200 from June's revised estimate of 205,400 and up 1,900 over the total for last July. Manufacturing and nonmanufacturing increased 100 each during the current period.

Employment in manufacturing at 24,300 in July was up 100 over the June revised estimate of 24,200. Durable goods increased by 100 due to more business in fabricated structural metal products while nondurable goods employment remained stable.

Estimated employment in nonmanufacturing industries at 181,300 was up 100 during July and up 3,100 over last July's total. Mining and finance, insurance and real estate had no change during the current period. Construction was up 300 due to more business in highway and street construction, except elevated highways and in heavy construction. Transportation and public utilities employment was up 100 due to increased activity in services incidental to water transportation.

Wholesale trade was up 100 due to more business in machinery, equipment, and supplies. Retail trade was down 200 with six of the eight major groups reporting declines. Services and government were down 100 each mainly in educational services.

Total employment of Baton Rouge LMA's residents was estimated at 212,000 during July, an increase of 4,300 from June's revised estimate of 207,700 and up 6,100 over last July's estimate. The unemployment estimate of 24,900 for July was down 1,700 from June's total and up 3,200 over July of last year. The unemployment rate at 10.5 percent was down from June's revised 11.4 percent. State rates were 12.4 percent in July and 13.1 percent in June. The local civilian labor force totaled 236,900 during July, up 2,600 from June and up 9,300 over July of last year.

Average weekly earnings of the Baton Rouge area's 15,600 production workers in all manufacturing industries was $480.28 in July, down $13.93 from June's revised average. Average weekly hours at 41.8 were down 1.4 hours and average hourly earnings were up five cents. Less overtime worked at premium pay contributed to the declines.

Employment should stabilize while seasonal factors reduce the unemployment rate some during the coming months.

The Baton Rouge and Gonzales Job Service Offices served 3,602 individuals with new or renewal application, and placed 2,372 applicants in jobs during July.

The consumer price index for June, 1983 for all urban consumers was 298.1 and for all urban wage and clerical workers 297.2 using base period 1967=100.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment in the Lafayette LMA during July stood at 95,600, a decrease of 1,600 workers below the June level and 3,100 below a comparable period a year ago.

The decrease occurred in the nonmanufacturing segment. The bulk of the decrease was in mining which showed a 1,100 decrease over the month of June. This is understandable because of lack of drilling activity in the area. There was a decrease of 2,800 over the same period of time a year ago.

Other minor decreases were noted in some of the other industries such as manufacturing, transportation and public utilities, wholesale and retail trade, services and government.

The unemployment rate should remain stable over the next month. The oil industry continues to experience a slack period.

LAKE CHARLES
EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage & salary employment remained unchanged from June as manufacturing rose by 100 and nonmanufacturing dropped by the same amount. Since July 1982 wage & salary employment fell a total of 2,700. Factory jobs declined 1,000 while nonfactory jobs declined 1,700.

Manufacturing employment dipped 100 below the month ago level. This occurred in the durable goods group. The current factory job estimate falls 1,000 below the July 1982 total. Nondurable goods garnered the lion's share of this loss fostered by reduced product demands.

Employment in the nonmanufacturing industry sector inched upward 100 over June and all of the increase resulted from heightened port activity. During the twelve month period beginning in July 1982, nonmanufacturing employment declined 1,700. Losses occurred in all industries except Transportation & Public Utilities, Trade, and Services. These gains moderated the substantial losses led by construction.

Little change in employment is expected during August, but unemployment should begin to decline as summer job seekers abandon their work search in order to prepare for return to school.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment rose by 300 to an estimated 52,000 during mid-July.

Manufacturing, estimated at 7,400, was unchanged from the June estimate; however, there was movement. Durable Goods was up by 200, while Nondurable Goods was down by 200.

Transportation, Communications and Public Utilities gained 200 workers over the month. Government was up by 200, reflecting the hiring of youths on summer projects. Wholesale and Retail Trade was down by 100. All other segments were unchanged.

Employment is expected to remain relatively stable until educational facilities reopen for the fall semester. Unemployment is expected to remain high.

NEW ORLEANS AREA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment in the New Orleans Labor Market Area in July increased to 505,900, up 1,000 from June. Manufacturing total employment held steady. Nonmanufacturing exhibited scattered gains which offset decreases in other industries.

Manufacturing employment totaled 44,300 in July, showing no change from June's total. Increases in ship and boat building and reparing offset seasonal downturns in seafood processing. The upturn in fabricated metal products was cancelled out by the downturn in the other durable goods sector. Manufacturing employment is down 2,800 compared to one year ago.

Nonmanufacturing added 1,000 workers despite decreases in several segments. Construction pushed up, taking advantage of the best season of the year for outside activity. Water transportation showed a sizable gain. Services were boosted by substantial increases in business services, private health services, and miscellaneous services. Wholesale trade pulled back up from the reduced level of the past few months, with the gain mostly in nondurable goods. However, wholesale trade still remains well below the level of a year ago. Retail trade over the month was hurt by downturns in employment by food stores, building material dealers, and furniture stores; partly offset by upturns in automotive dealers and service stations, apparel stores, and general merchandise stores. Finance reflected retrenchments by banking as well as other credit agencies. In insurance, layoffs by carriers were balanced by hires by agents. Local government was lowered by further summer downward adjustments by the public schools, partly offset by additional summer hires by city and parish administrative services.

Production workers in the New Orleans area earned an average $358.80 a week in July, $12.82 above last month's average. A rise of $0.26 cents in average hourly earnings and an increase of 18 minutes in average weekly hours caused the change. Compared to one year ago, average weekly earnings has increased $1.75.

Estimated unemployment in July decreased to 55,700, down 3,600 from June. A reduction in the number of entrants and reentrants into the labor force along with a gain in employment were mostly responsible. Joblessness presently comprises 10.8 percent (not seasonally adjusted) of the labor force compared to 11.5 percent (revised) in June and 9.6 percent in July of last year. Recipients of regular unemployment insurance benefits numbered 16,042. Approximately 40.0 percent of the claimants were nonwhite; about 30.0 percent were female.

Nonagricultural wage and salary employment in the coming months will probably exhibit an overall increase. Preparations for the 1984 World's Fair will benefit many industries. Private and public educational services will reflect the beginning of the fall school term. Many other changes in this area in the near future will depend on developments in the national economy. Unemployment will hopefully show some overall decrease as many persons who recently entered and reentered the labor force will withdraw to return to school.

SHREVEPORT AREA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and Salary Employment in the Shreveport Labor Market Area dropped to 146,300, down from the revised June estimate of 147,800, and 500 less than July 1982. Manufacturing employment increased 900 from last month. The nonmanufacturing employment total declined 2,400 during the past month and was caused primarily by reduced payrolls in local education.

Total employment in manufacturing increased from 23,200 last month to 24,100. All of this gain except 100, occurred in durable goods and was the result of increased production in the manufacturing of transport equipment. An increase of 100 in nondurable goods accounts for the total gain of 900 during the past month.

Employment declined in nonmanufacturing. The current total of 122,200 is down from 124,600 in June. Slight gains occurred in construction and retail trade. Employment in mining dropped because of the continuing slow down of drilling operation. Local Government had the sharpest drop when local educational facilities closed for the summer.

The 18,600 production workers in this area had average weekly earnings of $387.03, up from $372.53 in June and $334.03 last July. Average weekly hours are nearly unchanged at 39.9, compared with 39.8 last month and 40.1 one year ago. The average hourly earnings moved up from $9.36 last month to $9.70.

The civilian labor force in the Shreveport LMA is 166,500, with 146,700 employed and 19,800 unemployed. The rate of unemployment is 11.9 percent. The revised rate for June is 12.5 percent and was 9.7 percent in July 1982.

The unemployment rate for this area should gradually descend from the present level. Total employment is expected to increase, however, this increase will be restricted until conditions improve in oil and gas exploration, drilling and related activities.

EMPLOYMENT AND PAYROLL TRENDS

Total nonagricultural employment in Louisiana during August amounted to 1,577,000, a decrease of 6,500 from the previous month and a drop of 24,100 from the comparable period a year ago. Nonmanufacturing employment was estimated at 5,800 below last month's level due largely to a decrease in government payrolls and a labor dispute in the communications industry. Manufacturing employment for August fell as a result of a downturn in the durable goods producing industry.

1/ Includes Avoyelles, Grant, & Rapides parishes. 2/ Includes Ascension, East Baton Rouge, Livingston, and West Baton Rouge parishes. 3/ Lafayette Parish only. 4/ Calcasieu Parish only. 5/ Ouachita Parish only. 6/ Includes Jefferson, Orleans, St. Bernard, and St. Tammany parishes. 7/ Includes Bossier, Caddo, and Webster parishes.

This public document was published at a cost of 37 cents per copy by the Louisiana Department of Labor, Office of Employment Security, Research and Statistics Unit, P.O. Box 44094, Baton Rouge, Louisiana 70804. Its purpose is to disseminate information pertaining to the labor market developments and employment trends under the authority of Part 602.6, Title 20, Chap. V. of the Code of Federal Regulations. It was printed in accordance with the standards for printing by state agencies established pursuant to R.S. 43:31.

During August, total employment in the durable goods segment of manufacturing decreased by 800 workers. Employment in the lumber and wood products industry was up as a result of more business throughout much of this segment. Furniture and fixtures employment was lower for August due to a slowdown in the manufacture of household furniture. Increased demand for concrete, gypsum and plaster products accounted for the increase in stone, clay and glass products payrolls. Primary metal industries employment edged upward as an increase occurred in the manufacture of nonferrous metal castings and iron and steel foundries experienced an upturn in business for the current month. Fabricated metal products employment was down as cutbacks occurred in the production of fabricated structural metal products. Less business for firms that manufacture farm and garden machinery, special industry machinery, and certain miscellaneous machinery was responsible for payroll cutbacks in the machinery, except electrical, industry. Production of communication equipment fell in August, resulting in lower employment for the electric and electronic equipment industry. A decrease in transportation equipment industry payrolls was centered in the ship and boat building and repairing segment. Employee cuts in certain miscellaneous manufacturing industries accounted for the downturn in other durable goods.

Nondurable goods employment, at 101,800, was 100 more than last month, but it was 4,400 below the August a year ago figure. A seasonal decrease in the canning and packaging of seafood contributed to the decline in food and kindred products employment. Increased output of certain miscellaneous apparel and accessories moved up the employment level in apparel and other textile products. Less activity at paper mills, paperboard mills, and establishments manufacturing paperboard containers and boxes was responsible for the drop in paper and allied products employment. Petroleum and coal products payrolls were up from last month due to an increase in petroleum refining. A return to the normal employment level in the state's leather and leather products industry, after having experienced a drop, accounted for the upward turn in other nondurable goods.

Louisiana's employment in nonmanufacturing industries during August was 1,385,300, down by 5,800 from the July level. Mining employment was lower due to decreased production of crude petroleum and natural gas. A lessening of activity in the heavy construction segment accounted for the decline in construction payrolls. Transportation and public utilities suffered a sizeable decrease in employment level as a result of a labor dispute in the communication industry and a slowdown in business for the state's ports. More business for general merchandise, apparel and accessories stores and for eating and drinking establishments resulted in higher trade employment during August. Services payrolls were slightly higher as a result of increased activity at hotels and other lodging places. Losses in local government, except education, were most instrumental in government's decrease in employment level.

Average weekly earnings of Louisiana's 135,500 production workers in manufacturing decreased from $401.17 in July to $385.13 in August, a loss of $16.04. Average hourly earnings fell from $9.93 to $9.75, but hourly earnings were up by $0.28 over the same time last year. Weekly hours averaged 39.5 during August, a decrease of 0.9 hours from the July figure.

Estimated total unemployment in Louisiana, at 229,500 for August, was down by 9,800 from July's level of 239,300. The current month's unemployment rate was 12.0 percent compared to 12.6 percent last month and 10.8 percent in August of last year. A decrease in the number of entrants and reentrants into the job market and a decline in the number of people filing for U. I. benefits contributed to the drop in Louisiana's unemployment rate for August. The comparable national unemployment rate for August was 9.2 percent compared to 9.4 percent in July and 9.6 percent in August of last year. Louisiana's civilian labor force increased from 1,897,700 in July to 1,907,800 in August. Total employment in August was up by 19,900 over last month's figure.

The state's unemployment level is expected to continue its declining trend during the next month as students leave the labor force to return to school. Nonagricultural wage and salary employment is predicted to respond to the usual pattern of increase in the next two months.

EMPLOYMENT AND PAYROLL TRENDS

The Alexandria Labor Market Area nonagricultural wage and salary employment increased in August to 54,100. This was an increase of 200 from the previous month and an increase of 300 from this month a year ago. This months gain was in nonmanufacturing with manufacturing remaining unchanged.

Manufacturing employment, unchanged since the previous month, has declined 500 from this month a year ago. The decline was in durable and nondurable goods.

Nonmanufacturing employment during August was estimated to be 48,800. This was an increase of 200 over the past month. The increase in employment was in the retail trade and services industries, with the other segments remaining unchanged. Compared to this month a year ago, nonmanufacturing employment has increased by 800. The major gains were in the retail trade and services groups.

Total employment should increase during the next thirty days with a decrease in the unemployment rate.

BATON ROUGE AREA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural employment in the Baton Rouge LMA was estimated at 205,100 during August, no change from the prior month's revised estimate and up 2,000 over the total for last August. Manufacturing employment increased 100 during the current period while nonmanufacturing dropped 100. Area labor disputes had a significant effect on total nonmanufacturing employment.

Employment in manufacturing industries totaled 24,400 in August, up 100 over the July revised estimate of 24,300. Durable goods had no change while nondurable goods increased by 100 due to more business in industrial organic chemicals and in agricultural chemicals.

Estimated employment in nonmanufacturing at 180,700 was down by 100 during the current period and up 3,000 over the last August's total. Mining and wholesale trade had no change during the current period. Construction was up 300 due to more business in general building contractors - nonresidental buildings and in plumbing, heating (except electric) and air conditioning. Retail trade increased 100 with gains in department stores and eating and drinking places. Services were up 200 due to increased activity in business services and health services. Total government employment was up 300 during August. All three branches reported increases with the largest in local government. Highlighting the declines was a 900 drop in transportation and public utilities resulting from labor disputes. The drop of 100 in finance, insurance and real estate resulted from declines in financial and insurance establishments.

Total employment of Baton Rouge LMA's residents was estimated at 213,000 during August, an increase of 2,900 from July's revised estimate of 210,100. The unemployment estimate of 24,200 for August was down 1,500 from July's total and up 1,900 over August of last year. The unemployment rate at 10.2 percent was down from July's revised 10.9 percent and up from the 9.8 percent rate for last August. The local civilian labor force totaled 237,200 during August, up from 1,400 from July and up 9,200 over August of last year.

Average weekly earnings of the Baton Rouge area's 15,700 production workers in all manufacturing industries was $483.53 in August, down $5.88 from July's revised average. Average weekly hours at 41.9 hours were down 0.4 hours and average hourly earnings were down three cents. These declines resulted from less overtime worked at premium pay.

Settlement of some of the local labor disputes and seasonal increases in education employment should return our local employment statistics to its improving trend during the coming month.

The Baton Rouge and Gonzales Job Service Offices served 2,333 individuals with new or renewal applications, and placed 706 applicants in jobs during August.

The consumer price index for July, 1983 for all urban consumers was 299.3 and for all urban wage and clerical workers 298.2 using base period 1967=100.

EMPLOYMENT AND PAYROLL TRENDS

Lafayette's nonagricultural employment in August stood at 93,900, a decrease of 1,700 from the previous month and 4,600 below the figure of August last year. Much of the decrease in the nonmanufacturing segment was in construction, transportation and public utilities, trade, services, and government. Within the manufacturing segment durable goods was down from the previous month.

The largest decrease was noted in government with a decrease of 1,000 over the previous month. The cause of this was the decrease of payrolls in public school employment.

Government employment will increase next month as school resumes and government payrolls increase.

Other elements in the estimating series appear to be stable as unemployment is leveling off.

The Lafayette LMA unemployment rate is expected to remain at its present high level until oil drilling activity resumes.

The economic indicators do not predict an increase in the rig count any time soon.

LAKE CHARLES
EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment fell 400 below the July level due to losses incurred in the nonmanufacturing sector. Over the year losses totaling 2,400 were evident both in factory and nonfactory establishments.

Manufacturing employment remained unchanged between July and August, but the current estimate falls 600 below the year ago total. Durable goods declined by 200 while nondurable goods showed a drop of 400.

In the nonfactory industries, construction garnered the larger share of losses with a 30 day decline of 400 and a year long loss of 2,400. These losses were moderated by gains in Trade, Services, and Finance, Insurance, & Real Estate.

Little change is expected in employment during the next 30 days.

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment in Ouachita Parish decreased in August to an estimated 51,100. This was a decline of 500 from the previous month, but an increase of 900 from August, 1982. Losses were in nonmanufacturing.

Manufacturing, estimated at 7,200, was unchanged with only minimal changes in lumber and wood products and other durable goods offsetting gains and losses of 100.

Nonmanufacturing employment during August was estimated at 43,900. This was a decline of 500 from the July estimate. Government showed the largest loss, 800, reflecting the end of summer sessions in the educational facilities as well as the end of the summer youth program. Transportation, & public utilities had a minimal loss of 100. Services increased by 200; while finance, insurance & real estate along with wholesale and retail trade each had minimal gains of 100.

Over the next month, employment should rise slightly as the unemployment rate declines slightly. Opening of educational facilities will be the primary influence.

NEW ORLEANS AREA

EMPLOYMENT AND PAYROLL TRENDS

Nonagricultural wage and salary employment in the New Orleans Labor Market Area in August moved down to 500,400, a level of 5,400 below July. A labor dispute in nonmanufacturing accounted for most of the change. Manufacturing was lowered by layoffs by ship and boat building and repairing.

Manufacturing employment plunged to a new low in August to total 43,800, 600 less than last month and 3,100 less than one year ago. The largest decrease was in ship and boatbuilding and repairing. The lack of contracts caused the layoff of approximately 500 workers at area shipyards. The seasonal downturn in seafood processing caused the decrease in food and kindred products. Minor increases in machinery offset minor decreases in chemcials and allied products. Other manufacturing industries held steady over the month.

Nonmanufacturing changes were dominated by a labor dispute involving a large number of employees in communciation. Local government reflected layoffs of summer workers by city and parish administrative services. Federal government and state government held steady. In services, the hotel-motel industry and private health services exhibited downturns probably temporary in nature. Mining reduced employment slightly. Real estate adjusted downward to the lowest level since the early part of 1982. More favorably, construction added workers, mostly in heavy construction and employment by special trade contractors. Wholesale trade pushed up in the nondurable goods segment. Retail trade total employment held steady.

Area factory workers earned an average $339.98 a week in August, $7.92 less than last month. Average hourly pay dropped $0.16 and average weekly hours were cut by 12 minutes. Compared to one year ago, production workers in the New Orleans area are earning $15.49 less a week.

Estimated unemployment in August moved down to 56,200, a level 1,200 below July. The normal late summer decrease in the number of entrants and reentrants into the labor force was mostly responsible. Current joblessness comprises 10.8 percent (not seasonally adjusted) of the labor force compared to 11.0 percent (revised) in July and 9.6 percent in August of last year. Beneficiaries of regular unemployment insurance totaled 16,180. About 40.0 percent of the claimants were nonwhite; approximately 29.0 percent were female.

Nonagricultural wage and salary employment in the coming months will probably display an overall upturn. The settlement of a labor dispute will return communication to a normal level. Private and public educational services will pull back up from the summer low as the the fall school term moves along. Preparations for the 1984 World's Fair will bring gains to many industries. Many other changes in this area will depend on developments in the national economy. Unemployment will likely show an overall decrease as many students return to school.

SHREVEPORT AREA

EMPLOYMENT AND PAYROLL TRENDS

The nonagricultural wage and salary employment in the Shreveport Labor Market Area increased to 146,800 up from 146,100 last month and remains 1,000 below the year ago estimate. Total manufacturing employment shows a gain of 200 from last month, while nonmanufacturing employment increased 500 during the past month.

The manufacturing employment total, at 24,300, is up from a revised July estimate of 24,100, and 700 less than August 1982. A loss of 200 in metals and machinery was more than offset with a gain of 100 in lumber and wood products and a 300 increase in other durable goods.

Employment in total nonmanufacturing rose 500 during the past month. Most of the growth during the month occurred in construction and services. Mining is up 200 more than the estimate for the previous month. Trade shows a slight gain. Total government employment (23,800) is 500 less than the revised July estimate.

The average weekly earnings of 18,700 production workers in this labor area dropped from $389.42 in July to $370.60. Average weekly hours show a decline from 39.9 last month to 39.3, while average hourly earnings fell from $9.76 to $9.43 during the past month.

The current civilian labor force for this area is 167,400 including 148,300 employed and 19,100 unemployed. The unemployment rate is 11.4 percent, down from a revised July rate of 12.1 percent.

The general economic outlook for this area during the next few months will improve. Nonagricultural wage and salary employment is expected to move up from the present level, while total unemployment will remain near or slightly below 19,000.
